everyone can fly and humans thinking they were the most superior set of animals?"

Boon Yil dramatised and there were gasps and woofs and howls that filled the room.

"Were they really that self-involved, the humans of the early 21st century?" Asked Neema, the healing plant.

"Oh yes. It all started in the centuries before that. They explored the world and travelled across seas on boats and ships.

The view from Boon Yil's classroom

Funny thing Neema, they were made of wood that was hacked into pieces when it was living", Boon Yil confirmed.

"Why, because we can float on water when we are dead?" Neema was horrified.

Boon smiled with a sad knowing that she was robbing her class of their innocence. This coming of age lesson she was entrusted to preach as a mind caretaker always drained her energy. She went on to explain the history of the human race and their inexplicable deplorable actions. She told them tales of the industrial revolution, colonisation, patriarchy, using the colour of human skin as a reason for ill treatment. She told them all about the inherent need to own and capture and rule and possess and torture. The stories just flowed to enthrall her audience. They couldn't believe their ears.

"They were slaves. They were slaves to their wants and were taken advantage of by powerful men and women", Boon Yil finished.

There was a stunned silence rife through the room.

"Were they selfish, Boon? That selfish?"

"Did they think they have a right to kill under false guises that their victims thought was justified?"

"Yes, to both your questions Rick and Elijah"

"What's plastic made of Boon? Did mother earth not dissolve it?"

"No, she couldn't my dear squirrel."

Spirul and his team had a saddened look in their eyes. It strengthened their faith in the planet they were maintaining today. There was a sense of pride that washed over them as they exchanged looks. But it also made Spirul angry. He trusted Boon from the day he first met her, 45 years ago. She mended his mind when he had found, buried deep in the earth what they called aeroplanes. The rust from the metal had killed the micro-organisms and plants around it. The materials in the plane were of different textures. Spirul was a sad robot when

he was brought into Boon's office all those years ago. Over the years Boon had worked with his mind to overcome the carnage he saw. At the age of seventy five, he was a fine young robot thanks to Boon. Boon called for a short break. She needed some fresh air and the class needed to talk this amongst themselves. "We will concur here in 360 human breaths."

CHAPTER THREE: THE BUTTERFLY EFFECT

"Boon, we need to ask you something. So what is the one fundamental thing you would say is similar between us and the humans of the dark ages?" Asked Phyllus, the amoeba who was furiously floating in a glass of water from the pond. Boon thought for a whole long minute as everyone waited for her answer. "There is one thing my dear. They all had a shorter lifespan and didn't enjoy the long life we do. However, the one thing similar I would say is that we all die in the end." By now Brinner the butterfly was flapping his wings furiously and was circling the class excited like he stuck a great idea. He took charge and announced to his friends.

"In that case we will never die! I don't want to have anything in common with those abominations"

"Yes!!!" They all cheered him on.

"I, Brinner, have had a thought and how about with Boons blessing and Spirul's team we give up are summer holidays and work on a project to beat death?"

There was loud cheering and jumping and flying as Boon had now given rise to their new leader. Brinner continued, "Guys, we all know that there is a finite amount of energy on this planet. When we die, our energy goes back into nature. We will develop a technology to harvest this energy when death comes to us. This energy, this life will then be planted into the biosphere till it

Brinner flapped his wings and how!

takes a new shape. We will work towards the energy retaining all the memories of its lifetime and to be reborn as another life form! We will defeat the weak flesh and nurture the willing spirit." There was murmuring amongst the class. They convened in small groups to voice their ideas. By the end of the discussion, everyone was on-board with what their leader had to say. To beat death! This would make everything so much better. Spirul and Boon were watching all this from the back of the room. All it took was Boon instilling in them the need to excel and be better and more evolved than the humans from the dark ages.

Boon whispered to Spirul "This, my dear Spirul, is what the humans of the dark ages would have called the butterfly effect." She was pleased with her pun.

He laughed and said "What do you know? You're just a teacher, eh?"
