

## EXAMINED

# Sony Mobile Projector MP-CD1

**W**hen gadgets across all categories are headed towards smaller, more portable configurations, why should projectors be left behind? While mobile projectors aren't exactly a new idea, they are still not seen too often, certainly not in the form of a well designed, robust product that can actually substitute for a full scale projector. The Sony MP-CD1 Mobile Projector takes a good shot at being exactly that.

In the box, along with the projector you get an HDMI cable, a USB-C charging cable, a micro-USB to USB-C adapter and a case for the projector. The projector body looks and feels somewhat like a powerbank in the +10000mAh range. With the aluminium polished build, however, it does feel quite premium to hold. In terms of ports, you get an HDMI/MHL in, USB-C charging, USB out and 3.5mm audio out. The case itself is just to protect it during storage and charging, and is of no use when you actually intend to use the projector since there are no cutouts for projection.

On the body, you have a multi-purpose power button and a focus slider. Pushing the power button briefly shows you the battery level via an indicator LED and also allows you to switch between a standard image mode and a dynamic view mode that offers more vibrant colour reproduction. There's also an onboard speaker for the audio output.

To start off, the included HDMI cable works perfectly. There's no delay in detecting the input when connected to a laptop's HDMI out. The onboard 1W speaker also shows no delay, but as expected from a speaker unit on a mobile projector, it turns out to be barely capable of pushing out average volume levels at a terrible quality. However, you don't get to complain for too long since you are getting a 3.5mm output port. The MP-CD1 fires up in a quick 5 seconds, so there's barely any waiting time. The picture at 105 lumens is fairly bright and crisp at 854 × 480, considering the small package that is projecting it. It also accommodates for cramped spaces with a minimum throw distance of 1.15m. The onboard 5000mAh battery provides a good two hours of performance and also doubles as a portable power source via the USB-out port. While using the projector on an inclined surface or with a tripod, the Auto keystone correction feature kicks in that the image is adjusted for any potential tilt so that it always appears at the right aspect ratio to you. At ₹30000, some might consider the MP-CD1 a tall order for what it offers, but this could be the best portable mobile projector out there right now.

## SPECIFICATIONS

**DIMENSIONS:** 16.0 mm × 83.0 mm × 150.0 mm | **WEIGHT:** Approx. 280 g (9.9 oz) | **DIAGONAL PROJECTION IMAGE SIZE:** 101.6 cm (40") at 1.15 m (3.77 ft)/Max. 304.8 cm (120") at 3.45 m (11.32 ft) | **BRIGHTNESS:** ANSI 105 lumens | **DISPLAY RESOLUTION:** 854 × 480 | **COLOR REPRODUCIBILITY:** Full colour (16,770,000 colours) | **ASPECT RATIO:** 16:9 | **LIGHT SOURCE:** Approx. 50,000 hours (Life) | **CONTRAST RATIO:** 400:1 | **CONTINUOUS PROJECTING TIME (FULL CHARGE):** Approx. 120 minutes | **HDMI CONNECTION(S):** HDMI 1.4b/MHL 1.4 (HDCP1.4) | **OPERATING TEMPERATURE / HUMIDITY:** 0 °C to 35 °C (32 °F to 95 °F) | **RATED OUTPUT:** DC 5 V/1.5 A, 1 port

# Artis Speaker

**W**hile you can read about the Artis BT915 in our May issue, this one's all about its smaller counterpart, the Artis BT908. The unit almost looks like its larger sibling has been shrunk in a photo-editing software while maintaining the aspect ratio. It also weighs four kilos lighter at 6.5kgs. You get the main speaker body, a separate wireless mic, a remote control and an audio input cable in the box. The speaker comes with an in built battery, so it can be used in external conditions as well.

The speakers supports playback via USB, Bluetooth, Aux-in as well as SD card. It also provides FM playback, and has an extendable

antenna at the back for the same. The 908 comes with quite a few controls. Apart from the mic volume and overall volume, you get dials for echo, bass and treble. You also get playback control at the back of the speakers as well as the remote. So, whether you're sitting next to the output unit or at a distance, your music playback will be under your control. And so will the karaoke, since the mic supports a distance upto 8 metres.

In terms of music performance, the 908 still lacks in base, despite its 8 inch subwoofers. This comes unexpected, since we've seen smaller speakers pump out better base with smaller subwoofers. Considering that this unit costs just about 6000 at the time of writing this piece, we aren't complaining...much.
