

SyskaLED SmartLight

Syska LED's SmartLight is a product that tries to offer you a simple plug and play experience. You plug the bulb into any normal bulb socket and install Syska's Smart Home app onto your smartphone. For starters, you can turn the bulb on and off from the app. You can also schedule it to do so at specific times. You can also choose the brightness of the light, either from the dedicated tab in the controls once it is on, or from the card on the home screen. This is where the fun starts – you can also select the colour of the light from a colour wheel as well as the colour temperature, which, as Syska puts it, brings 3 million distinct shades at your disposal. The bulb dashboard also lets you choose between predetermined scenes like Party, Rainbow, Reading etc, some of which let you configure the scene specifics like range of colours, intensity and more.

The automatic tab lets you create Automatic triggers based on local temperature, humidity, weather, air quality, sunrise/sunset time, a particular time or a particular device's state and execute a particular scene, trigger another automation or simply force a particular device to perform an action. For instance, if it starts raining outside, the bulb can flash blue to let you know; if the temperature goes below a certain level, a smart plug connected to the room heater will turn on etc.

The SmartLight also boasts of Alexa and Google Assistant support. Overall, at 1799, the Syska LED smart-light is a good first smart home device to get started off down the path of automating your entire home.

SPECIFICATIONS

LUMENS: 480 Lm | **LIFESPAN:** 25,000 Hrs | **WIRELESS RANGE:** 10 m | **INPUT POWER:** AC 220V, 50 Hz | **SUPPORTED PLATFORMS:** Android 4.3 & Above, iOS 6 & Above

AVerMedia Live Gamer Extreme

We got our hands on the AVerMedia Live Gamer Extreme (LGX). The RECentral Software offers a lot of options. You can choose a single source (as in, your game stream) versus multi-source (as in, your game stream, a webcam, an overlaying image etc.). You can record, stream to a single or multiple sources. For streaming, you need to enter a custom streaming link and key for the software to grab, or you can link a number of accounts to the software. The list includes YouTube, Twitch, Facebook and others. Quite a few graphics card solutions require you to sign-up for a dedicated multi-streaming service to be able to stream to multiple platforms at once. Compared to that, the LGX might appear to be a steep initial investment, but going by its performance and features, this investment will pay itself off in due time.

SPECIFICATIONS

INTERFACE: USB 3.0 (Verified chipset: Intel chipset with native USB 3.0 host controller) | **VIDEO INPUT - DIGITAL:** HDMI - Analog: Component | **AUDIO INPUT - DIGITAL:** HDMI - Analog: RCA L/R | **AUDIO MIX INPUT:** 3.5 mm MIC IN - 3.5 mm AUX IN | **VIDEO OUTPUT:** HDMI (Pass-through from HDMI and Component input) | **CAPTURE RESOLUTION (MAX):** Uncompressed 1080p@60fps (60Mbps) | **SUPPORTED RESOLUTION:** 1080p (Max: 1080p@60fps), 1080i, 720p, 576p, 576i, 480p, 480i | **ENCODER FORMAT:** MP4 (Codec: H.264+AAC) | **COMPATIBLE SOFTWARE:** DirectShow compliant software (Xsplit, OBS, PotPlayer, AmaRecTV) | **DIMENSION:** 145.3 x 97.2 x 29 mm | **WEIGHT:** 182 g

EUME Backpack

On the surface, the bag looks like a pretty standard travel backpack with a single zipper leading to a massive pocket-laden compartment, as well as a small, easily accessible compartment on the front. On the back, you get two pairs of massaging units - for the shoulder and for the hips. There's a ton of adjustment that can be done with the bag, through adjusters on the shoulder straps, the base of the bag, the sternum strap as well as the waist strap. Getting the right fit is important for the massager to work properly. At ₹5,999 this one of a kind product is an absolute steal.
