>> FEEDBACK FOR THE SEPTEMBER 2018 ISSUE OF DIGIT

Send your feedback at
editor@digit.in

 Robert, I have been a fan of digit magazine from my school days and reading it has always been my first priority whenever I go to my college library. But this time I got the same rush that I felt when I read digit for the first time.

Your 'The RSS FEED' column has really worked well, it has the very gist of what Digit is about and why it is so popular, I mean the first page itself has created wonders this time. I'm sure you will be getting a lot of applauds from readers and even from your team.

Thanks for making your column that way... It made my day.

—Dhruv Chauhan

d Thank you so much for reading. Just curious, what method did you use to read it? People have used mirrors, selfie cameras, image editing software... Even painstakingly reading it backwards, word by word.

I sincerely hope you liked all the other stories in the magazine as well. The guys enjoyed writing them a lot because these weird topics are what they are into by default. For them, it was like finally being given freedom to write whatever they wanted to; the crazier the better!

—Robert

 I am a huge fan of your magazine. Best magazine for tech guys,

geeks, or even common people with its easy to understand content. Love all the things stuffed into this mag especially the tech section, reviews, Alt and Arnab I loved your article "Good Guy Dark Web", very interesting, being a visitor to Dark Web myself, but SKOAR is my personal favourite.

Now coming to the topic, what I wanted to discuss with you is about the issue of using plastic packaging for sending the magazine. I believe that you are aware about the environmental problems caused due to the use of plastics. Across consumer industry, there is a drive going on to eliminate usage of plastic bags and various other disposables. Being a responsible publication, you must think about switching over from plastic packaging to eco - friendly bags... One

such option could be paper packaging. It would be a great contribution by you towards the environment. Please take this issue very seriously as it is a matter of our future.

I expect you to add better games in the DVD. Keep up the GAMING POSTERS and DO NOT SWITCH OVER TO CAR POSTERS!

—Ayush Kumar

d Thanks for the feedback Ayush. About the plastic bags, they are recycled and we have a buyback policy in place with our distributors to ensure that they are recycled. We have always used recyclable material, and this is why the new government regulations in various states did not affect us at all. Rest assured, we are as concerned about the environment as you are. In fact, even our paper is sourced from paper farms that have a proven record of positive green cover by planting far more trees than they cut down for paper.

—Arnab

 I remember buying my first Digit magazine two months later after it was first published. It looked beautiful to me. I was a university student then. Years passed. I bought Digit whenever I could. Then job happened, marriage and kid happened as is the simple way of life.

The kid grew up to become an avid reader. And somehow he got all sold to Digit. Now it has become my responsibility to buy Digit every month for my 13 year old son. I don't go for subscriptions since it never worked out with me.

Coming to the point, I have always loved Digit. The recent shift to look at the world of technology from Science' point of view makes this a wholesome magazine. Although I have never written to Agent001, I would definitely love to have a tête-à-tête with him someday. Unless of course my son goes on to become one. He says he is preparing himself to be a part of the Digit family some day.

We read it all. All of it. The parts of it which I fail to read before him

CORRIGENDUM

I'm reading this journal after a long gap of 6 years. I used to read, when I was in college. Here is the feedback that I want to give, in page number 14 - WWDC 2018: Where's the innovation? article. About iOS 12, it is mentioned as it will be available for iPhone 6S and it's successors. But, it will be actually available for iPhone 5S and its successors.
