US states fight back on Net Neutrality

California passed the
strongest net neutrality laws
in the US. Now, firefighters
have joined the battle
against ISPs who throttle
data. The New York Times
sued FCC for hiding evidence
of Russia meddling in last
year's appeal process.

WHAT'S NEW

Amazon goes all out with 13 new devices launched

Amazon held an impromptu event and launched several devices including a 75% Louder Echo Dot (smallest Echo speaker) and an upgraded Echo Plus. Echo Auto is a similar device for your cars. Amazon's hardware weren't known to be bass heavy, so what did they do? They launched the Echo Sub which takes care of all the boom-boom that you'd need. In a similar vein, Amazon also revealed the Echo link and the Echo Amp. The Echo Show received an upgrade in the form of a larger 10-inch screen. There's a new Fire TV Recast which allows you to beam video wirelessly to supported devices. An

Alexa Microwave and an Alexa Clock were also launched. And if you felt that was odd, there's even a speakerless Alexa Input device.

Apple Watch Series 4, iPhone Xs, Xs Max, and Xr

Apple announced the next set of devices with the Apple Watch Series 4 coming off as a decent upgrade but the iPhones ended up being a disappointment. There used to be a time when articles about the new iPhones had all sorts of new features to talk about but not anymore. The smartphone ecosystem is so competitive these days that Apple is no longer the benchmark for manufacturers, and

it's mostly centered around Qualcomm's next-gen SoC and how manufacturers can make the most of it. We're glad to see Apple working on adding AI compute capabilities to the A12 Bionic chip but with just

one company's R&D team working on it, Apple is at a natural disadvantage. We have our eyes on Siri Shortcuts and the Apple Watch but everything aside from those have already started fading from our minds. This, however, did not stop Apple from jacking up the prices as the iPhone XS and XS Max start from ₹99,900 and ₹1,09,900. The more affordable iPhone XR starts from ₹76,900.

MIT grad creates leak-detecting robot

You Wu, an MIT graduate, has created a robot called lighthouse which traverses through pipes and finds leaks by detecting suction forces. His creation could help stem the loss of 2 trillion gallons of drinking water annually.

French schools ban phones for kids under 15

High school students in France will no longer have access to their phones as France passed a nationwide ban on smart devices including smartwatches, tablets and phones. They can access phones at the discretion of the teacher.
