BROWSER WARS ANDROID EDITION

20 Android web browsers tested

Abhijit Dey | abhijit@digit.in

As tech writers, we spend an incredible amount of time in the day scrolling through web pages while reading the latest news hitting the internet. Whether we are commuting to work or simply taking a break, the web browser is a highly used app on our phones. So you're obviously expecting the best experience on mobile web browsers. We prefer a satisfying experience without any stutter or crashes. While most of us stuck with the popular ones like Google Chrome or Mozilla Firefox on our phones, we wanted to find out

whether there was something better among the plethora of web browsers on the Play Store. In this pursuit, we decided to conduct a comparison test of Android web browsers including the popular ones and not so popular ones. Our list included the minimalist versions of popular web browsers as well. This would allow us to find out whether these mini-versions are enough to handle your web browsing needs. The objective of this comparison is to determine the best performing Android web browser in terms of speed, security, privacy and support for various HTML5 and web-based

applications. It will also be safe to assume that the winner will be the most favourable as a daily driver.

In this comparison test, we evaluated 20 Android web browsers. They are as follows along with the version numbers of the browser we tested at the time of writing this article.

- Brave Browser 1.0.58
- Google Chrome 69.0.3497.100
- Dolphin Web Browser 12.0.11
- DuckDuckGo Privacy Browser 5.10.4
- Ecosia Browser 3.5.3
- Mozilla Firefox 62.0.2
- Mozilla Firefox Focus 6.1.1
