

Veronica Mars gets revived

Cult classic Veronica Mars will return to Hulu and will also stream its first three seasons. <https://digit.in/oct18-41-1>

Captain Marvel Trailer

Marvel's most anticipated Captain Marvel first trailer is out on YouTube, the movie will be releasing in March. <https://digit.in/oct18-41-2>

FiiO FB1

Sleek white power

The white colour choice for the FB1 makes it look refined right out of the box.

This feeling is enhanced with the metal highlights overall and the minimal buttons on the control unit. The earbuds have a glossy finish - which would usually mean a scratch-prone, stain-prone surface. However, according to FiiO, the FB1 has been coated by a nano-spray that makes it resistant to scratches and makes it easy to clean any stains on the body.

The FiiO FB1 supports the aptX, AAC and SBC audio codecs. The FB1 supports connectivity with two devices at the same time. In addition to that there's a host of controls available between the

three buttons onboard that let you carry out a wide variety of actions during calls.

The FiiO FB1 packs in massive 13mm drivers. What that means for the end user is that these IEMs can get loud - really loud. These units aren't exactly pristine in terms

of audio quality. According to FiiO, they've been build with popular music of today in mind, hence, the lower frequencies are noticeable more

prominent. While that is mostly a good thing, it is a drawback if your taste exceeds the boundaries expected by FiiO.

On fairly complex tracks like *Pull Me Under* by Dream Theater, the FiiO FB1 does uniquely well, considering its price point. While there's a noticeable bias towards the lows and the lower mids. However, that doesn't overpower the other areas of the audio spectrum as much as you would expect. The FB1 would be a delight for bassheads looking for bluetooth IEMs that only fail when pushed to the extremes. On the other hand, the same IEM would definitely let more balanced audiophiles down. For them, a better alternative, albeit at a ₹2k higher price, would be the Sony WI-SP500.

—Arnab Mukherjee

GIGABYTE X399 AORUS XTREME

Checking all the boxes

GIGABYTE built the X399 AORUS XTREME with the intention to make the most of the new 2nd gen AMD Threadripper processors. These processors are quite the power-hungry bunch and one of the key improvements that we see with the X399 AORUS XTREME is the VRM upgrade to a 10+3 phase setup as opposed to the 8+2 phase setup that the previous flagship motherboard had. The board has heatsinks and extra cooling all over the place. The VRM heatsinks in particular are more open with thicker and durable fins. There's even a heatpipe running across them. Each M.2 slot comes with an aluminium heatsink.

BUILD.....	84

This would be one of the few motherboards that we've seen with a 10G NIC.

While the technology is yet to be widely adopted in India, workstations are built to last so having a 10G NIC makes it future-proof.

This board has focused a lot of the little things, for instance we see thermal

pads where they're really needed and all the exposed I/O contacts are gold plated which is a plus in our books.

Even the RGB lighting is less tacky and not so much in your face, which is more than what can be said for a lot of products in the market.

The form-factor is E-ATX so this might be an issue with certain cases so you need to make sure of that before purchasing one. Overall, the X399 AORUS XTREME is a great choice as a board for the 2nd gen Threadripper.
