Google fights travel-ban

Google staff is reportedly discussing how to counter Trump's travel-ban by altering biased search results. <https://digit.in/oct18-42-2>

Corsair STRAFE RGB MK.2

New armour for silence

Price
₹17,920

F

or a premium mechanical keyboard, the Corsair STRAFE RGB MK.2

delivers what is expected.

High-end features including full key rollover, macro recording, RGB lighting customisation, multiple profile support, all of these are supported. With Corsair's new iCUE software, playing around with most of these features is fairly easy. Because of the MK.2 design treatment, the STRAFE lineup finally receives dedicated multimedia and volume controls including a volume wheel. You can store macro and lighting profiles on the keyboard using the software that will be retained even after it's connected to a different system. The wrist rest is still the same flimsy one from the older variant. You receive a keycap puller, wrist rest and extra keycaps for FPS and MOBA games.

Both the new MK.2 versions of the STRAFE RGB and K70 RGB keyboards have the same MRP in India. The differences between the two are minor at this point. The biggest distinction is the switch options on the STRAFE that is limited to Cherry MX Red and MX Silent. On the other hand, the K70 supports all the Cherry switches. Considering all these aspects, we would suggest you go for the K70 RGB MK.2 if you're torn between picking one. If you have an invested preference towards the white plate below the switches and the chassis design on the STRAFE RGB MK.2, only then should you consider buying it.

—Abhijit Dey

SPECIFICATIONS

ASUS ROG STRIX SCAR II GL504 Gaming Laptop

Faster in an all new better avatar

Price
₹92,990

T

The ASUS ROG

STRIX SCAR II GL504 has a 15.6-inch IPS panel running at FHD and like the previous SCAR, this too has a 144 Hz refresh rate. This time around, there's no G-sync.

A GTX 1060 isn't going to push the upcoming games to the level that would benefit from such a fast panel but when you're thinking of competitive titles, then a 144 Hz panel is certainly a welcome feature on a gaming laptop.

Most of the current AAA titles run with ease and the older competitive titles do even better. Coming back to what we have on hand, we started with the trusty 3DMark with the latest NVIDIA drivers. We managed to get 10372 in Fire Strike, 5396 in Fire Strike Extreme and 2765 in Fire Strike Ultra.

Moving on to games, Rise of the Tomb Raider scored 64 FPS with all the settings cranked out and BioShock Infinite managed to hit 114 FPS. We tried playing Strange Brigade as well but there were certain issues in the beta so we'll leave that be. In terms of pricing, the GL504 offers a nice mix of features that strike a balance for the price with competitors.

Overall, the ASUS ROG STRIX SCAR II GL504 makes significant improvements with the screen, the battery and the audio along with some RGB voodoo. All of which, makes it stand apart from the crowd.

—Mithun Mohandas
