JBL E55BT

Powerful, comfortable budget wireless over-ears

Price
₹6,699

Design plays a huge role in making a wireless over-ear headphone portable enough to be carried around like an IEM. The JBL E55BT has no lack of such measures by a long shot. The yoke is made of aluminium and a foam overlay on the headband is covered with textured fabric up to the ear cups, hiding the actual extent of plastic used in its design.

The feature set offered by the E55BT is pretty standard, save for the ability to pair it to multiple devices at the same time. While the foam earpads muffle out external sounds significantly, making them nearly undetectable even during particularly noisy public transport rides, the music does leak

out significantly, to the point where the person sitting next to you can recognise any track you're playing above the 70% volume level.

The E55BT doesn't lack power even by a far margin. Putting your phone's output at 100% as well as

the headphones might actually feel painful on high intensity tracks like *Back in Black* by AC/DC. Bring things down to the 75-80% range and you should be fine. The sound signature of the E55BT leans towards the warmer

spectrum of sound, but in a good way. *Call on Me* by Chris Rea is a track that has very distinctive vocals by the singer. While the bass drum and guitar in the song are clearly a notch above the vocals on the E55BT, they don't blur it out entirely. Overall, The E55BT performs best on electronic tracks where the tonal variation in the instruments involved is not much, so it was a natural on tracks like *Uptown Funk* by Bruno Mars.

The JBL E55BT manages to tick a lot of right boxes without following a similar rise in price. When it comes to audio, if you can look beyond the warmth in the E55BT's signature, it is a fairly well balanced pair of headphones worth your money.

—Arnab Mukherjee

SPECIFICATIONS

Fujifilm X-A5

A great camera for beginners

In terms of build, it was nice to see Fuji add some colour into the mix of things. The pink cladding feels nice to the touch while the silver base of the camera has a mildly textured finish. You can flip the 3-inch touch-sensitive display 180-degrees upwards, making it sit on top of the camera. The pop-up flash uses a dual hinge design, allowing for the actual flash tube to be pointed upwards if need be, for diffused lighting.

During the testing, the RAW files started to show some luminance and chroma noise at ISO6400, which is still a decent performance from a camera with a crop sensor. The highest you can push

the ISO (natively) is ISO 12,800, at which point, the noise is definitely noticeable.

The colours right out of the camera are actually very pleasing, but what really stands out is the excellent dynamic range the camera exhibits. The detail in the images coming

right out of the sensor is also pretty impressive. The weak point in the per-

formance of the camera is the kit lens which has a focal length of 18-55mm (35mm equivalent).

Overall, the Fujifilm X-A5 left us pretty impressed. It takes great photos and the autofocus works reliably and the touchscreen is fairly easy to use as well. We wouldn't recommend going above ISO 3200 for photos, and even when shooting at that high an ISO, exposing to the right will be absolutely critical. Additionally, you would be better off buying a prime lens to go with this camera as the kit lens will definitely limit you while shooting in low light conditions.

—Swapnil Mathur
