T-Series vs PewDiePie

The music production company is reaching dangerously close to PewDiePie's YouTube subscriber count. <https://digit.in/oct18-64-2>

KNOW YOUR PUNK

CYBERPUNK

AI constructs & cybernetics

Mega Corporations

Set in the future

Cyberpunk is considered the origin of all the punk genres. Typically, cyberpunk movies, games and novels are set in a dystopian future. There is plenty of hacking going on, which includes brain machine interfaces of various kinds. A common element is advanced AI constructs and robots that cannot be easily distinguished from real humans.

BIOPUNK

Virus Outbreaks

Genetic Mutations

Biological Horror

Biopunk realises the worst fears over biotechnology and genetic engineering gone rogue. There is usually a virus pandemic of some sort. One of the big questions that biopunk seeks to ask is when does the man end and the monster begin, exploring what it means to be human in the process. The human body is usually transformed or mutated in horrible ways.

DIESELPUNK

Stains & Dirt as an aesthetic

Bizarre Machines

Diesel based locomotion

Dieselpunk likes to get down and dirty, with over the top machines and eccentric gizmos. Dieselpunk fiction tends to be set on vast canvases, with huge flying airships, or even cities, and massive ocean liners. The word was coined by Lewis Pollak to describe his game, "Children of the Sun" in 2001, and has since then been adopted for other works of fiction.
