There is no real explanation as to why there is a punk suffixed to the subgenres of science fiction and fantasy. It is just one of those wonderful ways in which words gets hijacked for the use at hand. The element that is most common with the punk culture is the do it yourself approach, and a rebellious protagonist. The weapons, vehicles and clothing in the sub genres are typically hacked together from broken down parts in a post apocalyptic wasteland.

STEAMPUNK

Steampunk works are usually set in an alternate history timeline, where clock-work machines continued to be used, as if electricity was never invented. These elaborate machines with all their cogs, gears and wheels are typically powered by steam. The costumes used by the heroes are typically victorian. The works of Jules Verne can be considered as the best examples.

ATOMPUNK

Atompunk is retrofuturistic, and includes themes and aesthetics common during the space race and the cold war. This is when humans just started using rockets, and the wonders of atomic power were being discovered. Think flashy silver space suits, bubble shaped head gear, and laser pistols. All the chrome vehicles, ships, cars and space-ships very streamlined.

ELFPUNK

Elfpunk is a fantasy genre where the creatures and beings from fairy land are placed in a contemporary setting. Elves may use computers and headbang to heavy metal music. Because of the weird mish mash of settings, elfpunk fiction tends to deviate from established tropes and characters, and the kind of stuff one might typically expect from fantasy fiction.
