

DOES THIS SECTION EVEN NEED AN INTRODUCTION? FROM COMPUTERS TO MOBILES, AND HEADPHONES TO GPUs, IT'S ALL HERE...

THIS MONTH IN TECH: What exactly is going on in NVIDIA's new RTX cards, create better Instagram and Snapchat stories, network terminologies demystified, getting started with Ember.js, smart knapsacks and a peek into the innards of the brand new Pixel 3 XL

Delete your search history

Google has rolled out tools that lets you take more control of your digital footprints, and even erase your entire search history, if you so choose.

WHAT'S NEW

Amazon pitches image recognition software to US ICE officials

Amazon has pitched a controversial technology that allows realtime recognition and tracking of individuals in realtime, through live CCTV feeds, to US Immigration and Customs Enforcement (ICE) officials. The technology is called Amazon Rekognition, and the decision to use it to track immigrants has led to protests from Amazon employees as well. An anonymous Medium post supposedly from an Amazon employee details how the software has an increased rate of false positives when it comes to people of colour. There are concerns that if the technology is rolled

out, it would prevent illegal immigrants from accessing essential services, such as seeking out medical help when the situation demands it.

Facebook slapped with £500,000 fine in UK

UK's Information Commissioner's Office (ICO) has fined Facebook £500,000 for the Cambridge Analytica scandal. The fine is the maximum amount allowed for breaches of UK's data protection laws. Even though the data harvested by Cambridge Analytica was used by its parent company, SCL group for the 2016 presidential election in the US, an investigation by ICO found that the data of over

one million UK citizens was breached during the data gathering campaign, which was then exposed to misuse. Elizabeth Denham, Information Commissioner, said, "Facebook failed to sufficiently protect the privacy

of its users before, during and after the unlawful processing of this data. A company of its size and expertise should have known better and it should have done better." The decision to fine Facebook is only one result of an investigation into the use of personal data for political campaigns. A further update on the investigation by ICO related to the investigation is expected this month.

Privacy for Tigers

Geotagged photos of endangered wildlife, such as Tigers, Elephants, Rhinos and Tortoises can be mined for information by poachers. These wild animals could benefit from a little bit of privacy too. A new security framework explores a context aware, role based access to the data.
