A COLLECTION OF PRO TIPS FOR EVERYTHING. Without being limited to a particular topic, these tips are from popular software, to coding, to browsers, search, storage rules, password rules, mobile device hacks, bios cracking, tweaks explained and everything tech under the sun.

Create better Instagram and Snapchat stories

Rather than posting photos or videos using the default stickers and filters, there are many ways to step-up your Instagram and Snapchat game

Abhijeet Dey |

ARE YOU BORED of the available options of slapping on stickers and the limited filters on Instagram and Snapchat? Do you want to take your stories to the next level? We explored several apps out there to make that possible. Using a combination of these apps will allow you to spice up the stories that you post on Instagram or Snapchat. The same methods can just as easily be used for creating stories on other apps as well.

ADD FRAMES AND COLLAGES INTO YOUR STORIES

We know that any photo editing app can be used to add frames or create collages. However, Unfold does much more than that and it's specially catered towards Instagram users. While giving you a huge number of frames and collage styles, it allows you to add text and change the background colours of the frames. The best feature has to be the option to create multiple

'Pages' as a series of posts that can be saved and edited later. It allows you to actually create or write a story in a beautiful format. You can

preview all these stories to get an idea how your story will look like in a sequence. When you've finalised on the flow of the story on these pages, you can post them straight to your Instagram Story individually. They can also be manually shared as regular images since the app allows you to save each and every page. Unfold's frames

and collages are divided into five sets. The free version offers 25 frames and collages. If you like the other sets then you can pay for them individually. However, in our usage, we found the free set to be sufficient. Unfold supports both photos and videos.

EDIT YOUR STORY VIDEOS

Without getting your hands dirty with powerful video editing apps, you can get the job done with InShot. This is a must have app for anyone who's seriously into maintaining consistency in their Stories. Speaking about the video part, the first thing you should change is the aspect ratio. Since manufacturers have started moving away from the standard of recording videos in the 16:9 format, this app allows you to crop them into the desired ratio which is 9:16. Even though you record a video in the landscape mode, it will still need to be cropped to the 9:16 ratio. A rotated video isn't a pleasant viewing experience. This applies to both videos and photos. One more feature that users would like is the ability to add music to your stories. You might want to add some music to suit

the location or object you're recording or you simply want to get rid of the crappy audio in the background. Usually, the workaround to add music is to play some music on your phone while recording the story and the music is captured from your mic. A better solution is to use InShot and add music to your

story manually. You can also add stickers and GIFs into your videos.

POST SEAMLESS VIDEOS ON INSTAGRAM

While Snapchat allows you to continue recording a Story even after it crosses the
