Many users of the Pixel 3 have reported an infuriating camera bug that sometimes does not save a photo. <https://digit.in/nov-18-36-2>

Blueair Classic 280i

Function over form

The Classic 280i is designed with simple aesthetics so that it can easily blend in with standard home decor. The device exhibits solid build and one need not worry about accidentally toppling the thing over as it weighs 10kg. The device comes equipped with a single filter which takes care of air purification. The larger size of the filter means more surface area for the particulate matter to be trapped and larger adsorption area to eliminate harmful gases.

The air purifier sports almost all the features one would want from an IoT enabled air purifier. However, there are some considerable drawbacks because of which it lags behind the competition. Coming to its value for money factor, we believe that the Blueair Classic 280i could have scored higher if it had a slightly price.

The device would have won brownie points if there was a digital display to show the exact values instead of just colours like the Dyson Pure Cool or the Philips AC382. The app needs a major update to work seamlessly with the air purifier. There is also no physical remote to control the device, which is a let down considering the current state of the Blueair Friend app.

The Blueair Classic 280i is efficient and silent, which is a rare combination when it comes to air purifiers. What it lags behind in is IoT capabilities and how they are implemented in-app. If the company can fix things on that front, the Blueair Classic 280i will be an all-rounder that is definitely recommended.

Intel Core i9-9900K Review

Team Blue gets a new champion

It's commonly said that most video games only need four cores and anything more than that brings little to the table. So when Intel claimed the Core i9-9900K to be the world's best gaming processor, it did raise a few eyebrows.

The Core i9 series has finally made it to the mainstream desktop segment and seems to have completely usurped the characteristics of the Core i7 series. The i7 now feels like an i5 and so on. Hyperthreading is now the defining feature of the Core i9 series and with eight cores on the 9900K, it goes right up against AMD's Ryzen 7 2700X. In numerous gaming benchmarks, the Core i9-9900K scores more than the 2700X.

The games we tested include GTA V, Shadow of the Tomb Raider, Far Cry 5 and a few others. Synthetic benchmarks also paint a similar picture as the Core i9-9900K practically aces most of them. For example, in Cinebench R15's single-threaded run, the 9900K scores 216 points which is a huge improvement over the 7th and 8th Gen processors in the same segment. In the multi-threaded run, it manages around 2040 which puts it ahead of the Ryzen 7 2700X and in the same league as the Core i9 7900X.

Another improvement is that Intel is finally using solder for the TIM instead of thermal paste. This helps with the heat transfer, thus, increasing the potential for higher overlocks to be achieved with this CPU. A lot of the motherboards even market the ability of the 9900K to hit 5GHz on all cores, which is a first. Considering all things, it seems Intel has finally whacked the ball into AMD's court.
