Researchers at Stanford have developed a drone that can perch and move objects 40 times their weight. <https://digit.in/nov-18-40-2>

# ZOTAC RTX 2080 Ti AMP

## That'll be two kidneys please

**U**nveiled at Gamescom 2018, NVIDIA's latest family of GPUs have been met with quite a bit of controversy from the get go. It wasn't just limited to controversies regarding its feature set but also for the insane pricing that graphics cards based on these new GPUs have.

NVIDIA opted for the new RTX branding to promote the significant ray-tracing performance increment that the new RTX 2080 Ti, RTX 2080 and RTX 2070 are capable of.

### Features

The ZOTAC RTX 2080 Ti AMP edition is the fastest clocked graphics card in ZOTAC's portfolio. Like all other 2080 Ti graphics cards, this too has 4352 shader units and 64 ROPs tied up with 11 GB of GDDR6 memory. The NVIDIA RTX 2080 Ti Founders Edition has a base clock of 1350 MHz and a boost clock of 1635 MHz. The memory on the other hand is clocked at 1750 MHz and utilises a 256-bit wide data bus. The ZOTAC RTX 2080 Ti AMP edition improves on the boost clock by taking it up a notch to 1665 MHz but every other parameter remains the same. There's obviously the change in the external design of the card which is where the interesting modifications lie.

### Build quality

Most of the fancy plastic bits have been cleaned off to produce a more simplistic look that's all about geometric shapes. It uses a triple-fan cooler setup with 3x 90mm fans on the front. The plastic shroud housing the unit isn't covered all the way around. There are openings on the top, sides and even on the rear for air to flow.

The rear side has a metal shield that spans the length of the PCB. The heat

PERFORMANCE.....90  
BUILD.....75  
VALUE FOR MONEY.....75

sink juts further out leaving some of the fins exposed when viewed from the back of the graphics card. The SLI finger is gone and you now have the more expensive NVLink bridge should you want to chain two of these together. Removing

the shroud and the heat sink reveals a near naked PCB. We say near naked because there's an additional heat sink that's attached over the VRM circuit. Coming back to the heatsink, there are five heatpipes sandwiched onto a clean copper base plate.

The GPU itself is massive in size compared to the GTX 1080 Ti or any of the 10-series cards. As for the VRM, the GPU has 13 phases dedicated to it and is controlled by a u9512P controller. The memory is handled by a 3-phase setup which is also controlled by a u9512P, albeit it's a different one. The card is powered by two 8-pin ATX 12v connectors.

### Performance

Far Cry 5 ran at 135 FPS on FHD, 130 on 1440p and about 80 FPS on 4K. In GTA V, the FHD and 1440p frame rates seem to be fairly equal pointing to a fact that the card is a bit too powerful to use GTA V as a benchmark. In The Witcher 3, we managed to get about 184 FPS

on FHD, 138 FPS on 1440p and 85 FPS on 4K. It seems that the RTX 2080 Ti beats all previous cards in practically every single benchmark. Coming to the power consumption, the performance per watt ratio is particularly high as well. When we compare the performance-to-price ratio, we get the most expensive card that has been released for gaming. Every other GPU offers a greater performance-price ratio.

### Verdict

The ZOTAC RTX 2080 Ti AMP is a pretty powerful graphics card, there's no doubt about it. Simply considering the GPU, we have the RTX 2080 Ti as the most powerful graphics card but with features such as Ray-Tracing and DLSS not present in any released game, you simply end up paying a premium for a feature that's a few months away from being widely adopted. If money isn't a concern, then you can pick up any RTX 2080 Ti and you're set for at least half a decade. However, from a practical standpoint, this is way too expensive.

—Mithun Mohandas

### SPECIFICATIONS

CUDA CORES: 4352 | ROPs: 64 | CORE CLOCK: 1350 MHz | BOOST CLOCK: 1665 MHz | MEMORY CLOCK: 14 GHz | MEMORY BUS WIDTH: 256-bit | VRAM: 11 GB | TDP: 260 W | WARRANTY: 5 years
