Corsair K70 RGB MK.2 Low Profile

Honey, we've shrunk the K70 RGB MK.2!

Price
₹17,920

Low profile mechanical switches have finally arrived with the Corsair K70 RGB MK.2 Low Profile mechanical keyboard. We got to review the MX Low Profile Speed switch variant of the keyboard.

Design and build quality

It retains the anodised brushed Aluminium plate on the top with the plastic chassis at the bottom. However, to go with the low-profile design, the chassis was made 25 per cent slimmer. The same floating switch design has been continued with newly designed keycaps.

While the keycaps are still made of ABS plastic and the legends are laser etched, they seemed to have slightly hindered in quality control. Firstly, the density or thickness of the stem has changed from their traditional keycaps. It's a good thing that this hasn't led to any problems with the fitting on the switches. Secondly, even though they have a snug fit, they wobble and tend to appear slightly tilted. So, some keycaps don't appear to be in the same line. For several years, the cable connectors have been the same but now they have improved this with a new design. However, they didn't get the gold-plated treatment that could have extended their durability.

Features and accessories

A USB 2.0 passthrough port is integrated on the keyboard that can be used for data transfer. Volume and multimedia playback can also be controlled using the dedicated volume wheel and buttons. You'll find three buttons for specific functions including switching profiles, changing the brightness levels and locking the Windows key.

BUILD QUALITY.....75
VALUE.....60

RGB lighting can be controlled using the iCUE utility software along with recording macros and disabling key combinations. This keyboard supports up to three profiles that can be stored onto the device's memory.

Cherry MX Low Profile switches are a shrunk version of the regular MX switches. The company has managed to implement their iconic Gold Crosspoint contact technology in a smaller form factor that has a 50 million keystroke durability. This switch has been manufactured in two variants including the MX Low Profile RGB Red and MX Low Profile RGB Speed. It has a total travel of 3.2 mm with an actuation distance of only 1 mm while requiring an actuation force of around 45 cN. The Speed variant is going to be exclusive to the K70 RGB MK.2 Low Profile keyboard.

The included wrist rest is the same one that used to be shipped with the older K70 RGB keyboards. It wobbles while typing and it isn't a pleasant experience. It would have been great if it had shipped with the new wrist rest that's bundled with the Corsair K70 RGB MK.2.

Performance

With full key rollover implemented, all our keystrokes were registered in the games we played. It was verified on Switch Hitter. Playing games on this keyboard will be different at the beginning because of the incredibly short actuation distance and

it will take some time getting used to. Similarly, typing was also a new experience. The extremely short actuation and travel distances felt slightly difficult to handle but we got used to it after a few hours of typing. As already mentioned, the wrist rest tends to feel wobbly at times, you might perform better in typing while it's attached to the keyboard.

Verdict

The Corsair K70 RGB MK.2 Low Profile is dedicated to a niche of keyboard users who don't enjoy typing on full-scale mechanical switches. The low-profile design is fairly new and its adoption might take some time to kick off. However, it's great to know that there's a commercially available keyboard with this type of switch. The only downside would be the price of the keyboard. It's the same as a premium Corsair keyboard and people might not just be ready to buy such an expensive keyboard with a new switch design. The asking price is high for even mechanical keyboard enthusiasts. If you've experienced them earlier and are sure you like how the low-profile design feels, only then you should buy this keyboard.

—Abhijit Dey

SPECIFICATIONS

KEYBOARD SIZE: Standard, Numpad included | KEYBOARD BACKLIGHTING: RGB LED | SWITCH TYPE: Mechanical (Cherry MX Low Profile RGB Speed 50-million lifecycle) | POLLING RATE: 1,000 Hz (1 ms) | KEY-ROLLOVER: N-key rollover | INTERFACE: USB 2.0 | DIMENSIONS: Width - 43.8 cm, Depth - 16.8 cm, Height - 2.9 cm | CABLE LENGTH: 1.8m | WEIGHT: 1.08 kg
