

Mars could contain oxygen

According to Caltech researchers Mars could sustain more oxygen under specific conditions. <https://digit.in/nov18-64-1>

All-in-one bacteria screening

Scientists have developed a diagnostic platform that can screen for all known human pathogenic bacteria. <https://digit.in/nov18-64-2>

Fan Films

Normally, it is the Hollywood executives that call the shots when it comes to major franchises, but the best aspects of fictional worlds shine through when fans get behind the camera

Aditya Madanapalle | aditya@digit.in

Fan films are an integral part of geek culture, and a form of fan labour, or one of the activities that fans like to indulge in. Fan films have been around for almost as long as movie franchises have been around, with the first fan film being made back in 1926. Star Wars and the Matrix were two franchises with notable fan film scenes. Trekkies went ahead and made their own fan series, entire TV shows with episodes and story arcs. Until recently, most fan films were made by amateur film

makers, and the quality also showed. However, of late, with an increasing amount of technology being available to the common people, the quality of fan films have also increased. The result is a number of fan films with production values that are nearly as good as the films that roll out of Hollywood. Fan films are so good because they are pure fan service, without the commercial considerations needed for reaching a wider audience. Here are some of the best fan films out there.

VOLDEMORT: ORIGINS OF THE HEIR

This film is set after the Fantastic Beasts movies and before the Harry Potter movies. Grindelwald has just been defeated, and Voldemort is going around creating his horcruxes. The film introduces three new characters, who are also the heirs of the Hogwarts founders, who pledge to make the world a better place. The wand duels are extremely well choreographed, and the special effects are top notch. The film was originally made in Italian, and then dubbed into English. This is a very well told story, with a stunning twist in the end.

PRELUDE TO AXANAR

Set in the Star Trek universe, this movie is a proof of concept, a demonstration of what a well trained crew of film makers can produce on a low budget. The film was the result of a successful kickstarter campaign, and the production quality is out of this world. The framing of the story is similar to a documentary, where various characters tell their stories in an interview format. However, there are still plenty of spaceships, epic battles, and of course, awesome explosions. The production crew is in the process of making a longer film, called Axanar.
