TEN YEARS TO SAVE THE EARTH

The Intergovernmental Panel on Climate Change has released a report sounding the alarm bells – humanity has less than ten years to take all the possible measures to prevent irreversible and disastrous climate change.

O

n 12 June, 1992, 152 countries signed the United Nations Framework Convention on Climate

Change (UNFCCC). This was a global commitment to reduce greenhouse gas emissions. The idea was that all the nations in the world, at least all the signatories, would come together and

reduce the impact of human activity on the climate. Countries with developed economies were expected to lead the charge. In December 1997, an international treaty known as the Kyoto Protocol was accepted, which came into effect from 2005. The treaty had two “commitment periods”, 2008 to 2012, and 2013 to 2020. The Kyoto Protocol had a simple enough basis.

Carbon dioxide emission is the leading cause of global warming, and all the countries who were part of the agreement, resolved to meet stipulated emission targets. The second commitment period was known as the Doha amendment. A number of countries withdrew, or did not participate in the Doha amendment. The Kyoto Protocol had a top down structure, where the
