

### Valve ends Steam Link

Valve has decided to pull the plug on the Steam Link, a device that lets users stream PC games on their television. [https://dgit.in/dec18-10-1](https://dgit.in/dec18-10)

### Snapdragon 8150

Qualcomm will unveil its next mobile flagship processor chip, Snapdragon 8150 on December 4. <https://dgit.in/dec18-10-2>

## FEEDBACK FOR THE NOVEMBER 2018 ISSUE OF DIGIT

Send your feedback at [editor@digit.in](mailto:editor@digit.in)

Hi, I am 14 years old. Here's a joke for Agent 001 that my 8 year old self laughed at for four whole minutes.

An old lady was strolling through the park when she saw Jamie with a dog. "Does your dog bite?" she asked.

"No," said Jamie

When the old lady tried to pet the dog, it almost bit her fingers off!

"I thought you said your dog doesn't bite," screamed the old lady with blood dripping from her hand

"That's right," answered Jamie. "My dog doesn't bite, but that's not my dog."

Okay....I have to admit it was a whole lot funnier 6 years ago. Anyways thanks for such an awesome article and I have some feedback for ya: 1. Please make the DVD more interesting. 2. Could you maybe add some proper games instead of the indie ones. Thank you.

—Ishaane Bansal

Hey Ishan, Actually that joke was really funny, and it was also a part of the same study that came up with the funniest joke of all time that we wrote about. I'll leave the responses to your suggestions to Robert.

—Agent 001

Hi Ishan, we're actually thinking of taking the "DVD" online. Not only will this do away with the 8 GB limit we have

on the existing DVDs, but it will allow us to update things dynamically, so there will always be a current repository of software available to all our existing readers. We've been getting many complaints from people about the DVD being useless, and their laptops not even having DVD drives, so we figured we'd rather give you the new device and SKOAR! combo that you will find with this edition. Unless we are inundated with hate mail from DVD lovers in the next few months, that's the plan.

—Robert

Hello, Robert! Everyday, I wake up in the morning & set off with my daily routines. As I look around, I notice what an integral role technology has taken in our daily lives. It appears to be the base of the structure of life & society. From communication to leisure & from security to education, technology has spread its roots everywhere. Technology has been evolving rapidly to the point that it has become overwhelming. Keeping up has become a herculean task!

About a year ago, I was in quite the pandemonium as I couldn't seem to stay up to date with everything happening around me. But then I stumbled upon Digit, and never looked back. It truly has become my "Technology Navigator". I love the articles, in-depth & honest reviews of devices. What I like is that you

try to cover all the different types of new devices. To my surprise the November issue also had an electronic vinyl record player reviewed. It is starting to feel like you finally have a grip on even the craziest of gizmos.

Fast track is always well composed and helpful. I really benefited from the Python Edition. You really can't learn things that well from internet articles alone. And being an avid gamer I think Skoar is nice. But I think the Reevu section should have rating system for every aspect of the game.

As I have missed quite a lot, I was wondering how to get the older editions. The DVD, while resourceful is outdated technology and some things like the Alt section could be better. However, I can't use it as newer laptops don't contain DVD drives. I wish the content could be made available for download.

—Jass Chauhan

Thank you for your email. This is exactly what we aim to do – be a kind of funnel and sieve for all the millions of things happening across the globe in the science and tech world. Anyone would get overwhelmed by the sheer amount of data flowing in from hundreds of sources, and that usually results in either one of two things for readers:

1) People just stop learning because there is just too much happening and instead of being able to go in-depth into a few areas, they start skimming the surface, and actually know far less about everything as a result.

2) People focus on just a few areas so they can keep up with the updates, and although this allows them to go far more in-depth into their chosen areas, it introduces a bias of sorts. For example, the most common example is people being addicted to phones and its technology. As a result, they read up everything about phones and live and breathe phones, but completely ignore all other aspects of technology, many of which will impact even the phone industry in the future. As a result, someone who doesn't dive as deep into phones and also keeps abreast with the latest in displays, cameras, CPUs, GPUs, software, etc., ends up being far more informed.
