

### YouTube lets you stream free films

YouTube is competing with streaming services by allowing users to stream free movies with ad breaks. <https://digit.in/dec18-22-1>

### Somwear everywhere!

Somwear has a satellite messenger which will allow users to send messages and SOS alerts from anywhere. <https://digit.in/dec18-22-2>

# CREATE YOUR OWN WHATSAPP STICKER APPS ON ANDROID

WhatsApp's new sticker feature has gone viral with amateur and professional developers creating Sticker Apps in the Play Store. Here's how you can create your own, and perhaps even start making money from your creations

# W

WhatsApp's sticker functionality has witnessed a substantial amount of traction amongst its 200 million users since its recent launch. However, the limited stickers provided by

WhatsApp seem rather lacklustre. WhatsApp has now allowed third-party applications to create apps with sticker packs that can be integrated within the app itself. Creators and developers can design their own stickers for WhatsApp and effectively package them into an Android or iOS app. This creates an avenue for users to share their creations with the world and even monetise their creations by distributing the apps on the Play Store or the App Store.

However, to integrate your stickers into their WhatsApp the users will be required to download your application and keep it in the app drawer to ensure usability in WhatsApp. Ensure that you adhere by the general standards of stickers on WhatsApp by creating legal, acceptable and authorized stickers. You can read their terms of service at <https://digit.in/WATerms>.

WhatsApp has provided a sample code that allows users to create sticker apps with minimal or possibly even no level of coding knowledge required. This allows tech-enthusiasts who are sometimes code-novices to build an app that could feature on the Play Store or App Store with their customized creations free for the world to use.

## REQUIREMENTS

You need to follow certain requirements and abide by certain restrictions before creating a sticker app, in order to ensure that the creations are compatible with and well-structured for WhatsApp to successfully integrate them. Here are a few guidelines you must pay heed to while creating your sticker art.

- Stickers are usually images with a transparent background, therefore you must download a background eraser or a PNG image creator that does the same for your images.
- A sticker app can hold anywhere between one to ten sticker packs, each of which must be explicitly added to WhatsApp by the user. It is recommended to not try and use the 'Add all packs' functionality.
- Each sticker pack must hold a minimum of three stickers and a maximum of thirty.
- Each individual sticker must have an exact 512x512 pixel canvas within which the art must be contained. There must also be a 16 pixel gap between the edge of the sticker art and the border.
- The sticker must be capable of rendering on a wide variety of backgrounds such as white, black, coloured and patterned since users tend to have different kinds of WhatsApp chat backgrounds. Add an 8px #FFFFFF stroke to the border of
