

## Microsoft and Google unite

Microsoft and Google have partnered up to support a version of Google Chrome running on Windows on ARM. <https://dgit.in/dec18-26-1>

## Chrome Tabs Group feature

Google Chrome will soon receive a Tabs Group feature which allows users to bundle tabs into groups. <https://dgit.in/dec18-26-2>

Simply input your PNG file in the tab named 'path'.

stickers-master/Android/app/src/main/res and find the folders that begin with 'mipmap'. Replace these icons with your own launcher icon and you will be good to go. In order to create an icon that matches the needs easily, you can use Android Image Asset Studio which is built into Android Studio by default.

- Navigate to stickers-master/Android/src/main/res/values/strings. Here you will need to change the app name. This is the name that will be assigned to your app and be displayed in the user's app drawer after downloading your app.

- The application id will have to be changed as well in stickers-master/Android/app/build.gradle. Your applicationID must be unique and should not be used previously in the Play Store. To learn more about setting the optimal application id visit <https://dgit.in/AppID>.

After completing all the aforementioned steps, make sure that you run and test the app in Android Studio which will run checks. If there is any error, you will be able to see it in the logcat. If not, the app will launch and display all your sticker packs.

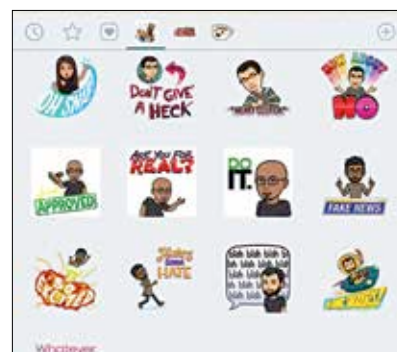

## SUBMIT THE APP

A release version of your app must be created before submission to the Play Store. Go to Build > Generate Signed Bundle/APK. Android Studio will go ahead and save your APK in project-name/module-name/build/outputs/apk. During the process of preparing your app for submission, you will receive the option to add a description to your app. Add the keyword WASTickerApps here to make sure that your app will be easily located during a search. Don't shy away from using additional keywords as well. The more, the better.

Finally, to submit your app you will need to sign up for a Google Play developer account, accept the developer distribution agreement and pay

This is how the finished product should look.

Stickers will appear in your WhatsApp once you have downloaded the app and added it to your collection.

the one-time registration fee and enter your account details. Instructions here: <https://dgit.in/playstoreapp>.

You can now show off your very own WhatsApp Sticker Pack app to your friends and family. You may even be able to possibly monetise your creations if your app gets enough traction. If that's not incentive to try this out, then what is? Get to creating and share some of your WhatsApp Sticker Apps with us at [editor@dgit.in](mailto:editor@dgit.in).

Replace all the essential components listed below in the contents.json file.
