

Video games as rehab

Amidst growing substance abuse, video game developers have started creating games to serve as rehab for children. <https://digit.in/dec18-40-1>

Instagram crackdown

Instagram have begun cracking down fake likes and followers that use third-party apps to gain traction. <https://digit.in/dec18-40-2>

THE MAKING OF MOWGLI

Speaking to Digit.in ahead of the World Premiere of Mowgli: Legend of the Jungle, Director Andy Serkis and actor Christian Bale talked about bringing this timeless tale to life

Adamy Sharma | adamy@digit.in

A

ndy Serkis is THE name in Hollywood when it comes to performance capture. Not only

has he played iconic mocap characters such as that of Caesar in Planet of the Apes, Gollum in Lord of The Rings and Supreme Leader Snoke in the Star Wars sequel trilogy and many more. Serkis was brought on to helm Mowgli: Legend of the Jungle in 2014 and after three long years into the making, the film was acquired by Netflix from Warner Bros for a December 7 streaming release on the platform.

Netflix hosted the World Premiere of Mowgli: Legend of the Jungle in India on 25 November, which saw cast member including Christian Bale, Freida Pinto, Louis Ashbourne Serkis and Rohan Chand walk the red carpet at Mumbai's famous Yash Raj Studios. Speaking to Digit.in ahead of the event, Director Andy Serkis talked about bringing this timeless tale to life. Here's an excerpt of that conversation.

The story of Mowgli and the Jungle book has been retold many times? What sets this film apart from previous renditions?

Serkis: This is a fateful retelling of the story which is going back to the time

of the book. It's an emotional journey which is the portrayal of very complex character searching for his own identity. We are not being fantastical in the sense that if anything happens to Mowgli we know it's not for real. It feels like it's grounded in historical, truthful. It is grittier than previous renditions.

The world of motion capture has changed a lot over the past few years and you've been at the center of it all. Can you share your experience with the technology from the early days of your career leading up to Mowgli?

Serkis: It has been an extraordinary journey that I have been lucky enough to be a part of. Just seeing the changes from motion capture to performance

capture, which was basically a change from just capturing the body to capturing the face and facial expressions. Then being able to take the technology outside to locations, then to be able to use it not just for human like characters but be able to use the data from a performance to actually to inspire many more different characters, for instance snakes, wolves, bears, they are much much more complex in terms of the facial shapes to create, so it's been a big change.

Is it more challenging as an actor to do motion capture sequences?

Serkis: It doesn't make any difference. Just a different set of cameras capturing your performance instead of a film camera capturing your performance.
