

Paraplegic people can use tablets

A brain-computer system is currently allowing paralysed individuals to use their tablet devices with thought. <https://digit.in/dec18-46-1>

Drone window washers

A company called Aeronex has built a window washing drone that can render human window washers useless. <https://digit.in/dec18-46-2>

Teardown: Microsoft Surface Pro 6

A nightmare while repairing.

Painful display

And by painful we mean that it's painful to remove, thanks to the strong adhesive used beneath. Not only is the screen expensive but it might even shatter if you exert too much force while removing it.

Upgraded heat spreader

Departing from a copper heat spreader for the heat pipes towards their end points, the Surface Pro 6 now uses graphite ones.

Compatible display

The new display on the Surface Pro 6, made by LG, is fully compatible with the Surface Pro 5. This means finding replacements shouldn't be an issue if something terrible happens and you have to replace your display.

Creepy heat pipes

With processing power going up, there need to be improvements made to handle all the heat being generated. With an additional heat pipe along with some heat-spreading thermal pads, it should be able to keep it cool.
