Find My Phone released an update with support for indoor mapping in public locations. <https://dgit.in/dec18-49-2>

NZXT H700i

Being smart doesn't make it useful

NZXT hasn't only shaken things up in terms of design but went ahead to improve cable management and added a 'Smart' device in the newly revamped H-series. The new 'Smart' device is supposed to allow the RGB lighting and fans to be controlled effortlessly using NZXT's CAM software. It also includes Adaptive Noise Reduction that apparently monitors your system's configuration and using machine learning, provides you with an optimised or ideal fan setting that can be applied to your system.

Exteriors

The overall size looks quite big but it's still a mid-tower ATX case. On the front panel, you won't find anything other than a subtle NZXT logo at the bottom. The panel is removable but difficult to pull out. It felt like we would break the plastic joints when removing, but a strong fit is way better than a loose panel. The top panel is also removable and it pretty snugly fitted, though not as tight as the front panel.

On the side where the motherboard sits, NZXT has an interesting removal mechanism for the side panel. Just push a button on the rear of the cabinet to remove it. It just snaps back in easily too.

Interiors

The interior follows the same minimalist approach on the outside. Removing the front panel gives you access to the magnetic dust filter placed in front of the fans. Behind the dust filter, you will get access to the three Aer F120 fans (case version) that are pre-installed in the case.

The PSU shroud does a good job of covering the PSU and all the mess created by the extra cables. The SSD mounting mechanism over the perforated shroud is interesting. To install the SSD trays, all you need to

do is press on the tab of the SSD tray and align it with the holes on the shroud. Since the perforation is present throughout the top of the shroud, you can literally place your SSD anywhere.

Something that we loved on the H700i is the cable management. Attention has been given to every part of the motherboard plate so that all your cables can be easily routed without looking like a mess. Additionally, there are velcro straps at multiple places. From your motherboard power cable to the CPU power cable, routes have been created to hold and secure the cables easily.

Thermal performance

At stock setting, the CPU and graphics card idled at 40 and 35 degrees Celsius respectively. The three intake fans and the exhaust behind are capable of keeping things cool. Once we started stress testing, the CPU shot up to 56 degrees, and the GPU hit 71 degrees. This is satisfactory, but far from the best around.

As an additional test we decided to add three additional fans on the top panel, to see what would happen. There was no change in temperatures. If you leave the front panel open temperatures drop about 2 degrees, but this isn't enough to ruin the look of the setup for.

Verdict

With the H700i, NZXT has stayed true to their minimalist design with some interesting features such as the cable management bar and the quick-release button for the side panel. The

PERFORMANCE.....	82
FEATURES.....	84
BUILD QUALITY.....	79
VALUE.....	62

case has generous space to support extra fans and radiators on both the front and top panel. However, these aren't really the major selling point for NZXT. The CAM-powered Smart Device is a unique innovation from them, but probably not worth the extra price tag.

They sell a non-i version without the smart device, and that's the one we'd recommend if you're OK with connecting your RGB lights to the motherboard. If you want digital control over your fans and lighting strips, then choose this model with the smart device built-in.

—Abhijit Dey

SPECIFICATIONS

MOTHERBOARD FORM FACTOR: Mini-ITX, Micro-ATX, ATX, E-ATX | POWER SUPPLY STANDARD: ATX standard (max. length of 180mm) | I/O PORTS: 2x USB 3.1, 2x USB 2.0, 1x microphone, 1x headphone, power | DRIVE BAYS: 3 x 3.5-inch HDD, 7 x 2.5-inch SSD | FAN SUPPORT: 3 x 120mm (front), 2 x 140mm (front), 3 x 120mm (top), 2 x 140mm (top), 1 x 120/140mm (rear) | RADIATOR SUPPORT: Up to 280/360mm (front), up to 280/360mm (top), up to 120/140mm (rear) | CLEARANCES: CPU cooler - 185mm, Graphics card - 413mm | DIMENSIONS (H X W X D): 440mm x 220mm x 464mm
