Samsung Galaxy Tab S4

Oh, what a beautiful display

Developers like the Surface Pro offer a full-fledged Windows experience whereas devices like the iPad try to mimic productivity through their app-based ecosystem. The Galaxy Tab S4 aims to give you the best of both worlds. It is an Android tablet that gives you everything you'd get on a Note 9 in a bigger form factor.

Build and Design

The build is good and feels premium with glass all around. The tablet is slim, and you will need to invest in a case to prop it up to type on it. The glass back makes the device feel really delicate. It's a big enough screen to play games and watch videos on, and from an ergonomic standpoint, the design is very functional, making the Tab S4 extremely usable in a variety of conditions.

Display and Audio performance

Calling the Tab S4's display fantastic would be an understatement. If you are going to watch a lot of movies and TV shows on the device, you are in for a treat. Plus, it's got a 3.5mm audio jack for your favourite headphones – something you can't take for granted these days. Apart from movies with very dark sequences, the tablet was pretty usable even under direct sunlight.

Coming to the audio, the speakers are powered by AKG, and could have been better. They sound decent when watching a couple of videos, but the iPad Pro offers far clearer and richer audio. You will need your headphones for the Tab S4.

Performance

When it comes to everyday performance, the tablet performed impres-

VALUE.....	64
DESIGN.....	87

sively without any stutters. It even works very well when you use apps in split screen. The only complaint is typing – we wish each letter was bigger in landscape mode.

When it comes to gaming, the tablet runs anything you throw at it. Only your grandparents will want to use the camera, because it cannot hold a candle to most smartphones, but it's good enough for Google Duo or Skype calls.

S-Pen

One of the coolest features of the Stylus is the ability to take notes without switching on the tablet. Just double tap the button on the pen and you can take notes on the display and then save them. The S-Pen brings with it an interesting set of features such as notes, smart select, screenwriting, live messaging, translate and more and for those of you that use these features, you will feel right at home.

Samsung Keyboard and DeX

As far as the build is concerned, the keyboard is made of hard plastic, has little flex and comes in black to compliment the tablet. It also feels as though it can withstand some abuse and offers protection for the tablet. Overall, the DeX experience is a move in the right direction for those that want a desktop-like experience to be a part of their tablet, but Samsung still needs to iron out a few kinks before it can take on devices like the Surface Pro.

Battery

The Samsung Galaxy Tab S4 has a 7300mAh battery that lasted 6 hours on the battery benchmark. However, in real-world usage, it can last much longer. Drop the brightness a little and you have a device that can playback content for almost 15 hours, which is impressive.

Price
₹57,900

Verdict

The Samsung Galaxy Tab S4 is a great tablet for consuming content thanks to its beautiful display. It has good battery life and a slim profile. However, the glass construction makes it fragile, and for the price, the speakers could have been a bit better. No complaints with the performance. DeX is interesting and does give the device a laptop-like feel. However, it isn't perfect and needs work before it can take on Windows-based 2-in-1 devices.
