

iPhone price drops

No, not in India unfortunately. The company offered subsidies to Japanese mobile operators to discount the iPhone XR. <https://digit.in/dec18-54-1>

Camera freeze on Note 9

Samsung's most expensive flagship is facing camera freezing issues, but there is a fix coming. <https://digit.in/dec18-54-2>

Samsung Galaxy Watch (46mm)

Big watch, bigger battery

Samsung sent us the 46mm version of the watch, which sports the bigger 472 mAh battery. With the straps included, the watch is heavy and you will feel the left centred around the dial. The best thing about this smartwatch is that it actually looks like it could be a high-end wrist-watch. The rotating bezel is a design that's found on many wristwatches by premium brands. The buttons on the right are large and easy enough to press.

The watch now autodetects 6 out of 39 workouts, which is impressive. In our use, we found the Galaxy Watch accurately started recording our activity after we had started doing it for 15 minutes. In the few short runs and cycling sessions we tracked, we found it to be accurate, with a variance of 7 percent or less. Besides walking and running, the watch can autodetect cycling, elliptical trainer, rowing machine and dynamic workouts all on its own. It can also track your sleep and stress levels by monitoring your pulse.

We got between 3-4 days of battery life, which is more than double that of the Apple Watch Series 4. Reading, interacting with notifications and responding to them is also pretty easy thanks to the large-ish 1.3-inch display that offers a 360x360 px resolution.

Tizen continues to be plagued with not having any developer support. Even after 5 years of being available on Samsung's Smartwatches, Tizen has failed to attract a native app from Facebook, WhatsApp or even Google Maps. Overall, a worthy buy for anyone who wants an Android-compatible smartwatch with great battery life.

—Swapnil Mathur

SPECIFICATIONS

PROCESSOR: Exynos 9110 Dual Core 1.15GHz | DISPLAY: 360x360 px, AMOLED display with Corning Gorilla Glass Dx | RAM: 1.5GB | STORAGE: 4GB | IP RATING: IP68 | BATTERY: 472mAh (46mm) & 270mAh (42mm)

Nokia 3.1 Plus

For those who really don't want a Redmi

The front face of the Nokia 3.1 Plus has a 6-inch curved display with an aspect ratio of 18:9 and a maximum resolution of 720 x 1440 pixels. It's got a toughened glass to protect it, says Nokia, but it's definitely no Gorilla Glass. The screen's brightness of 422 LUX seems sufficient for use under direct sunlight but the glass above it plays spoilsport by being overly reflective and a magnet for fingerprints. In AnTuTu 7.0 the Nokia outscored the Honor 7C, which has a Qualcomm Snapdragon 450 chipset with 4GB of RAM, by nearly 6,000 points. In the real world, the Nokia 3.1 Plus performed worse than expected. Launching heavy apps like Chrome took well over three seconds. Switching between tabs happened with several stutters in the animation. Imaging experience on the Nokia 3.1

Plus is a painful one: the cameras take way too long to capture photos and videos. To make matters worse the camera app is equally slow. Images taken indoors appear on the darker side, while images taken in the Live Bokeh mode are a little brighter. Low-light images, whether the Live Bokeh mode worked or not, are a disappointment, as they're grainy. A long battery life is one of the nicer qualities of the Nokia 3.1 Plus. In our benchmark, the smartphone lasted 8 hours, 59 minutes. If you want a cheap, no-frills smartphone, the Nokia 3.1 Plus is worth considering if you can live with the negatives we mentioned. It's still got a good build and a long battery life and Android One, which means regular updates for up to two years and a clean stock UI.

—Vignesh Giridharan

SPECIFICATIONS

SOC: Mediatek MT6762 | GPU: PowerVR GE8320 | OS: Android 8.1 (Oreo) | CARD SLOT: microSD, up to 400 GB | DISPLAY TYPE: IPS Panel | SIZE: 6.0 inches | RESOLUTION: 720 x 1440 pixels | CAMERA PRIMARY: 13+5 MP, f/2.0+f/2.4, AF | CAMERA SECONDARY: 8 MP, f/2.2
