

Pivo

Funding: US\$ 118,338 pledged of US\$ 25,000 goal

Link: dgit.in/Pivo

Smartphone photography is more than just mainstream right now, it is something that a lot of people depend on, directly or indirectly, for their livelihoods. Although, even if you're not a social media influencer, you could just be a stickler for perfection and improvement when it comes to getting the perfect shot. Pivo is something that is best described as a smartphone photography pod and it is just what you need to get all those difficult shots without relying on anyone else. Essentially, you need to put your phone on the pod in the desired configuration and fire up the Pivo app. Using this app grants you access to a host of interesting shooting modes such as face tracking, object tracking, many me, double take, flash and more. These modes are essentially instructions to the actual rotating pod on how to move around while it holds up the phone that is filming you. It also comes with a dedicated remote for manual control, just in case.

Qdee

Funding: \$58,492 pledged of \$6,385 goal

Link: dgit.in/Qdee

Kid friendly robot building and programming kits are all the rage these days. Hiwonder has created one such kit based on micro:bit aimed at solving the common issues and giving kids an easy-to-use platform to learn about robotics. Qdee is a platform that offers multiple kits using which children can first build their robots then use an easy drag and drop approach to program the same robots, using the Microsoft MakeCode visual code block editor. The kits themselves are manufactured using high-quality aluminium and eco-friendly ABS material. There are multiple types of

sensors available as add-ons like a proximity sensor, line tracer and more. Even physical extensions allow different capabilities. The Qdee platform is also IoT compatible, allowing you to control various IoT devices around your home from the Qdee app. The micro:bit is sold separately.

Hover 2

Funding: US\$ 688,345 pledged of US\$ 100,000 goal

Link: dgit.in/Hover2

If everything goes as scheduled, drones might have been legalised by the time you're reading this. If you want one, Hover 2 from Zero Zero Robotics is one you should consider. It's been two years since Zero Zero Robotics brought the idea of self-flying camera drones to reality with the Hover Camera Passport, and now they're back with a better, smarter camera drone with an extra pair of eyes. The swivelling stereo sensor on top of the drone, known as Optical Radar, gives it depth perception

and allows the other camera unit to focus on you or your subject. It also allows the Hover 2 to be better at things like obstacle avoidance, tracking subjects. The Hover 2 offers a number of preconfigured cinematic modes that let you take the perfect shot with none of the usual effort involved.

Wynd Halo + Home Purifier

Funding: US\$ 239,047 pledged of US\$ 50,000 goal

Link: dgit.in/WyndHHP

The concern regarding air pollution around us has been increasing every day, and this is visible in a large number of air purifiers hitting the market from multiple brands. The world of crowdfunding isn't far behind either. With an established reputation from a previously successful campaign for the original portable Wynd air purifier, Wynd Technologies is back with the Wynd Halo and the Wynd Home Purifier on Kickstarter. Wynd Halo is an air quality monitor

with over ten sensors that can detect a range of environmental factors. The Air ID feature can also tell you whether the pol-

luted air you're breathing contains pollen, smoke, smog, dander, chemicals, excess CO2 and more. There are also optimisation modes that work in tandem with other connected devices around the home. These modes are allergies, baby, productive, exercise and sleep, each with its own customisation for the air quality and ambience around you. Based on the Halo data, the Home purifier cleans up the air inside your home. According to Wynd Technologies, it can clean 537 cubic meters of air per hour. The purifier uses a proprietary V-series HEPA filter to achieve this. Overall, the Wynd Halo and Home Purifier is a smart solution especially for the more polluted parts of the country.
