NASA has made raw images from the Juno spacecraft in orbit around Jupiter available to the public. The images here are produced by citizen scientists and the image processing community.

Aditya Madanapalle | aditya@digit.in

The fast moving series of white oval storms are a feature known as the “string of pearls”

This image is created by artist Mik Petter, and turns the Great Red Spot into fractals

The elongated oval is a feature known as the “brown barge”, and is difficult to capture

These are known as “pop up” clouds that cast shadows on the lower levels of the atmosphere

This is a colour enhanced image of the the swirls at the southern hemisphere of Jupiter

Seen here are cloud belts and vortices in the tumultuous northern hemisphere

An example of planet scale pareidolia, the image is captioned “Jovey McJupiterface”
