

ENTRY-LEVEL FULL-FRAME DSLRs

ENABLING THE PERFECT SHOT

Every few years, the entry-level segment of DSLRs sees infusions of new technologies, thanks to the threat posed by smartphones. Given the rate at which smartphones are improving and people preferring convenience over image quality, DSLR makers have their work cut out for them. This year, there haven't been many launches in the entry-level segment, with Canon launching a handful of options and Nikon having completely refrained from launching anything in the segment. This made the fight a little biased towards the Canon camp. Interestingly, the market trend has been consistently indicating the declining sales of entry-level DSLRs around the world, and a growing shift towards mirrorless cameras. While Nikon hadn't launched anything in India since the Nikon D850 which launched in 2017, the company did release their full frame mirrorless Z6 and Z7 in India right after their international announcements. Let's get into the details of the winner in this category.

2018 ZERO1 AWARD WINNER Canon EOS 3000D

When we tested the Canon EOS 3000D, we knew we were handling a really great camera for beginners. The 9-point AF system with its 1 cross-type point enabled the camera to take photos in a whole host of shooting conditions reliably. The shutter response was good which when coupled with the AF system, meant that there were negligible missed shots. The auto focus slowed down slightly in low light situations, but the ISO performance was impressive, allowing us to push it all the way to ISO 6400 without a worry, which is impressive for an entry-level camera. Perhaps the most impressive aspect of the EOS 3000D is the quality of the images, both RAW and JPG. For shooting video, you will need to invest in an image stabilised lens so that you can make the best of what

the sensor can produce. FullHD video coming out of the Canon EOS 3000D looks wonderful and if you're just looking to capture some home videos, this is an ideal camera for it. Good image quality combined with impressive high ISO performance and an adequately fast AF system is why the Canon EOS 3000D wins the Zero1 Award for Entry Level DSLR.

BEST BUY Canon EOS 1500D

The Canon EOS 1500D is in many ways the same camera as the EOS 3000D, but with a few, but important differences. The 24-megapixel sensor offers more resolution than the EOS 3000D, resulting in an adverse impact on the high ISO performance. The autofocus system is still a solid performer. Canon has developed one of the most responsive and intuitive touchscreen systems for DSLRs, but the Canon EOS 1500D does not have one. At the entry level price point, you're getting basic, raw performance with a small drizzle of features. Of course, if a touchscreen is absolutely necessary for you, you will have to increase your budget. However, based on the number of queries we receive for a great camera that costs as much as (or lower) than a high end flagship, the Canon EOS 1500D is a no-brainer. However, we should warn you that anything above ISO 3200 on the EOS 1500D and you will be seeing noise in your photos. Best way to avoid that would be to pair the camera with a nice prime lens with a wide aperture to let in more light. Because of all the positive aspects, we consider the Canon EOS 1500D the best buy for entry-level DSLRs.
