

SECURITY WATCH

Shamoon malware resurfaces with Filerase

Back in 2012, oil giant Saudi Aramco lost 30,000 PCs to Shamoon, a malware strain that was mainly targeting corporations in the Middle East. After two years of inactivity, the malware strain has resurfaced to with the same targets but with even more firepower than before. This time it comes with the 'Filerase' component for erasing files on an infected system before Shamoon wipes the master boot record clean. According to Symantec, the addition of Filerase makes it almost impossible for victims to recover data from impacted systems. At this time it's unclear why the companies were targeted and how the attackers are distributing Shamoon and the new Fileraser component. Eric Chien, senior researcher at Symantec, describes Filerase as deleting files in [ROOT_DRIVE]\Users and on other drives that are less than 100 MB in size.

MOBILE WATCH

Doogee S90

Doogee has been a regular feature in this section in the past. So when they launch a modular smartphone with flagship level specifications, it shouldn't be a surprise that it gets featured here. The S90, according to Doogee, can survive at 1.5m depth for 2 weeks. Apart from that, it features the typical Doogee ruggedness - It can survive strong temperatures, drops & transport shocks, humidity, mold, salt spray corrosion, explosive gas, vibration and more. Driven by a Helio P60 Octa-core chipset and Mali-G72 MP3 GPU, the S90 is also powered by multi-core AI Processing Unit and NeuroPilot AI technology. With 16+8MP Dual Rear Cameras, the phone can also support a number of modules, including a night vision camera, a 5000 mAh power bank, a walkie talkie extension and a gamepad.

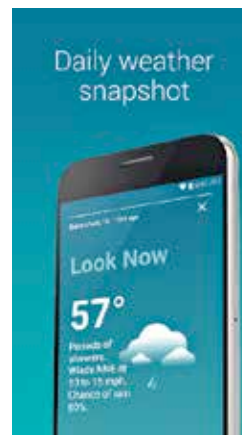

APP WATCH

The Weather Channel

IBM acquired The Weather Company a couple of years ago and have recently launched The Weather Channel app for Android. The Weather Channel App focuses on weather conditions relevant to Indian users, with a Cricket Forecast, Pollution Forecast, as well as sections specific to seasons in India - Monsoon Hub and Summer Hub. There's a lot of focus on personalisation and us-

ability to make the app useful to Indian users. The homepage itself starts off by showing you a general weather graph and significant weather events below it in the story format. Depending on how you interact with the app and what you search on it, the app learns and shows you more relevant data. Scrolling down you also get to see more detailed information about the place you're looking up including things like pollution data, mosquito activity and more. There's a radar section where you can pick and choose the data you'd like to

visualise and it is represented over a map of the area you're viewing. When it comes to alerts, you also get a high degree of control where you get to pick and choose exactly which type of alerts you'd like to receive from the app, and even set a do not disturb time period where the app won't send you any notifications. The app does suffer from some random crashes every now and then but overall, our experience was quite good and makes The Weather Channel a weather app worth recommending to most people.

SmartSMS

SmartSMS message organiser, along with standard categories into personal, transactions and spam, also detects bank account status, bookings and coupons. It can also auto delete messages after a certain interval.

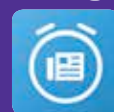

Fluid Navigation Gestures

Fluid Navigation Gestures is an app that brings customisable navigation gestures to nearly any Android phone. It does need root access for certain features and some of them are available after a one time payment.

WakingNews Alarm clock

With WakingNews Alarm clock you can actually wake up with the news being read to you. Take a pick among the available topics, or outlets. You can also configure it to read out the day's weather conditions to you.
