

California approves self-drive

California issues its first approval for an autonomous ride service to self-driving car startup. <https://dgit.in/jan19-7>

Electric scooter wars

2018 was the year of the electric scooter with fundraising, valuations, Uber and Lyft's entrance into the space. <https://dgit.in/jan19-8>

The Desktop CPU Core roadmap 2019-2021

this new architecture. Sunny Cove will be followed by Willow Cove and Golden Cove, starting from 2019 until 2021. Intel did not reveal the actual core counts of the processors that were demonstrated at Architecture Day but it is unlikely that Intel will attempt to incorporate a process shrink and add more cores in the same generation. So in all likelihood, we'll be seeing the flagship desktop Sunny Cove processor featuring eight physical cores like the Intel Core i9-9900K and later Willow Cove might see additional cores.

Speculation aside, Intel did delve into what it aims to improve with each architectural revision. Sunny Cove with its shrink will see improved Single Threaded performance and scalability. The scalability part suggests that Sunny Cove might get more cores but we can't say for sure at this moment. Another key change that we'll be seeing is the introduction of a new ISA (Instruction Set Architecture). The ISA and the increased Single Threaded performance go hand in hand. Intel introduced AVX-512

with their Skylake-X series of processors and also on their Xeon scalable processors but it seems that we'll be seeing AVX-512 for the first time in a desktop processor. We are not acknowledging the failed Canon Lake launch. Then there's Willow Cove which will house additional security features, a new cache redesign and additional transistor optimisation. Transistor optimisation is performed with the launch of every new processor family. To mention it explicitly would mean that either the change is massive or there's nothing major worth mentioning. The cache redesign aspect seems interesting, we might see a reorganisation of the cache hierarchy to allow larger data sets pertaining to AI workloads to be stored closer to the cores. Incidentally, Golden Cove, which is set to follow Willow Cove in 2021 will reportedly feature increased AI performance. This ties in with the

SHIELD OF PROTECTION FOR YOUR CAR ENGINE

SERVO[®] FUTURA-G+

2% FUEL ECONOMY*

- Synthetic engine oil for petrol & diesel cars/SUVs
- Protects cylinder liner & cam from wear
- Meets SAE 5W-30, API SN & ACEA A5/B5 specifications
