IF YOU ARE A JOURNALIST, content creator, marketer, business, influencer, or even just a regular user wanting to add some cool videos to your social media streams, Premiere Rush CC is right up there among the best video editing softwares for mobile devices around. The interface is pretty simple to use. For the raw video, you can import something that you have already shot, or you can edit your footage right through the app itself. Rush is currently available on iOS and Windows, but a version is headed to the Play Store as well.

NARRATE A VOICEOVER

You can record a voice over narration right from within the app itself. It is a good idea to do this once the clips are placed in the timeline and cut as required. The advantage of this approach is that you can narrate the voice over while the video is playing out. There are three audio streams available by default,

Narrating a voiceover in the timeline

and you just have to tap on the record button on any one of them to start recording the voice over. Adobe automatically detects audio clips as background music or voice overs, but you can check or change these settings by double tapping the clips in the timeline.

ADD A WATERMARK

To add a watermark, you need to have a .png version of the logo that you intend to use. You can download the image through a hosting site,

your Creative Cloud or email. Then, import the image to your project. By default, it will appear on the active layer of the project timeline. Tap and drag the image above the timeline, to keep it on its own layer. Then, you have to zoom in a bit, and long press the edges, which allows you to drag to increase the duration of the watermark. Ideally, this should cover the entire duration of the video. By default, the image will be in the middle of the video. Now, double tap on the image to fine tune the parameters. You can change the horizontal and vertical position, as well as the scale. You might prefer to reduce the opacity as well. Note down all the settings that you changed if you want

Adding a watermark to your video

the watermark to consistently appear in the same size and location on multiple videos. You can also cheat by creating a blank image of the correct aspect ratio, and setting the position, size and transparency in an image editor itself.

CUT AT A PARTICULAR FRAME

Rush is one of the few, if not only mobile video editing software that lets you cut on the exact frame. This is great for working with videos from a multiple camera setup, and switching between them in the middle of the action. To do this, first import the videos and layer them one on top of the other. Once you tap on the video, tap on either side of the play button to advance the video one frame ahead or behind. The blue bar in the timeline will remain on the particular frame. You can then tap on the scissors icon to cut at the exact frame.

ADD TITLES

Titles are a great way to grab the attention of your audiences, and Rush lets you add multiple titles onto a timeline. The titles are available from a filmstrip icon with a T on it. A submenu of preset titles appear, and you can choose a style. Playing it in the timeline will let you preview the motion graphics, if the chosen style has one. Double tap on the preview to edit a part of the title. You can also change the font, as well as the shape and
