

Sneak Peak on Chrome

Google Chrome for Android gets 'Sneak Peak' feature where it can load a new link without leaving the currently opened tab. <https://digit.in/jan19-35>

Mi Pay launches in India

Xiaomi launches their UPI payment service, Mi Pay beta version, in India which integrates into their MIUI. <https://digit.in/jan19-36>

ASUS Zenfone Max Pro M2

Has all the right ingredients of a powerful mid-ranger

The metal body on the M2 is reinforced with a reflective, glossy resin shell that looks like glass at first glance. The display on the front is reinforced by Gorilla Glass 6.

The Max Pro M2 implements a visibly better display that makes using the phone a much more enjoyable experience. The Zenfone Max Pro M2 failed to beat the Honor 8X in performance benchmarks and Honor's offering is still the best performing phone in that price range. While Asus has kept pushing monthly security patches and bug fixes every month for the Max Pro M1, the absent version update to Pie raises a lot of questions.

Something that improved in the Asus Zenfone Max Pro M2 is the camera on the back and the front. The photos come out better, especially in daylight and while taking portraits. In the day, the Zenfone Max Pro M2 takes photos that look pleasant. In low light, however, the camera suffers. The phone managed to take natural-looking portrait shots with the background blurred. The front camera seems to be much better too.

Even without fast charging, the big battery on the phone is one of the biggest reasons to buy this phone, and the best part is that the battery doesn't really make the phone all that heavy. The Max Pro M2 is reliable enough to be considered as one of the best mid-rangers.

Nokia 7.1 64GB

Flagship looks, average performance

The Nokia 7.1 is so gorgeous that they could literally use the same design for a flagship phone costing twice as much and we would still say that it's premium. The camera module sticks out and is aligned vertically just above the fingerprint sensor and houses the dual cameras with Zeiss branding and the LED flash. The 19.5:9 display panel has fairly slim bezels, save for the bottom chin which is larger than even the Nokia branding that resides on it. Nokia has brought an HDR10 capable LCD display to the ₹20,000 mark. Starting off with a measure of CPU performance, the Nokia 7.1 scored 1334 and 4443 on Geekbench's single and multi-core tests. 3DMark's Sling Shot Extreme did stress out the graphical capabilities of the phone, giving it a score of

just 935. Coming to the camera, the images have excellent centre sharpness, with the edges being acceptably sharp as well. The AF works acceptably fast but is almost always accurate to lock focus. In low light there's slow focusing and excessive noise reduction in images leading to quality loss. The Nokia 7.1 sports a 3060mAh battery which lasted a whole 8 hours on the PCMark battery test. The gaming performance of the phone could have been better but does a decent job for simple day-to-day tasks. The camera lacks RAW capture which is not a very big deal. All things considered, this phone makes a great value proposition. It's not an all-rounder by any means, but does offer a great display and a great camera in this budget.
