

Phrozen Transform

Funding: US\$ 273,230 pledged of US\$ 30,000 goal

Link: digit.in/PhrozenTransform

When it comes to 3D printers, the choice available to a customer has gone from scarce to a confusing number of options in the recent times.

Each type of printing technology comes with its own advantages and disadvantages. For instance, SLA printers are great for models with a lot of detail, but can only

handle small build volumes. The new Phrozen Transform SLA 3D printer, however, defies those restrictions to become comparable to a larger but less accurate fused filament fabrication (FFF) printer. With a 40cm Z axis, it offers you a choice between a single 13.3" panel or dual 5.5" panels. With the first pick you get a build volume of 29.2 x 16.5 x 40 cm which is about five times that of a

leading consumer level SLA 3D printer. With a 76 micrometer resolution, the detail isn't sacrificed either. It uses an interesting ParaLED™ Optical Engine for the LCD and works with both proprietary resins as well as 3rd party options. You can snag one for \$1299 now on Kickstarter or \$1799 later with a 1kg pack of 5 resins. The Transform is expected to ship earliest by June 2019.

DUO Turntable

Funding: About ₹7,537,836 INR (516%) funded

Link: digit.in/DUOTurntable

When you think of a turntable you probably think of snobby monocle wearing audiophiles of days gone by hugging their vinyl records close to their heart. However, in recent times, the vinyl record has been making a big comeback and it is that trend that the DUO wants to ride. It is a vinyl turntable that also comes with a bluetooth speaker making the vinyl setup a multifunctional system. The top of the unit has a smaller platter than usual – at 3.2 inches diameter, it is about a quarter of what a usual platter on a record player would be. The drive is a belt drive and according to the company, the DUO has a wow and flutter (a distortion measurement) of less than 0.9 percent (high end vinyl turntables usually have it under 0.10). Along with that there's a AT3600L cartridge and a spring based tonearm with a tracking force of 2.5grams. The speaker itself comes with Qualcomm CSR8670 chip and uses the aptX Bluetooth compression protocol along with Alexa compatibility. You can switch to streaming from vinyl playback any time. Also, if you get two DUO speakers you can configure them to act as stereo speakers.

P8S: Fastest Air Purifier

Funding: \$19,406 USD raised of \$10,000 flexible goal

Link: digit.in/RoidmiP8S

Air purifiers have gone from a novelty to a necessity in recent times. Dropping air quality across cities has increased the demand for high efficiency cost effective air purifiers that can keep you and your loved ones safe from the pollution that dwells in the air we breathe. While a major focus area for this has been purifiers built for home usage, another popular use case is the car air purifier that makes the air you breathe on the go safer. It is this use case that the Roidmi P8S claims to excel at. Part of Xiaomi's ecosystem chain Roidmi has been focused

on building smart cleaning devices for the ecosystem and the P8S makes some bold claims along those lines. Whereas many car purifiers claim speed and efficiency, the P8S can reportedly refresh the air in

your car in two minutes with its dual centrifugal fans that have a clean air delivery rate (CADR) of 70m3/h. Four independent curved air ducts ensure that this clean air reaches all corners of your car. The filter in play is a 3-layers integrated piece, where along with a prime filter and an ultra dense HEPA filter, you get a Nanoscale activated carbon filter specifically for tackling formaldehyde, other harmful substances, and odors. It is also designed to blend in with installation on the rear seat, an LED display visible in the rear view mirror, wiring that can go under the foot mats.

This is not Roidmi's first rodeo on Indiegogo, with two prior successful campaigns in their bags. So you can rest assured about delivery if Xiaomi's brand value wasn't enough for you.
