

Google to shut down Allo

Google has stated that its messaging app Allo will cease to exist after March 2019 in favour of the Android Messages app. <https://digit.in/jan19-49>

Snapdragon 855 unveiled

The Qualcomm Snapdragon 855 SoC was unveiled along with 5G modem and improved AI performance. <https://digit.in/jan19-50>

Teardown: Huawei Mate 20 Pro

Modular components but painful screen repairability.

Abhijit Dey | abhijit@digit.in

No fingerprint sensor behind

With the addition of the extra camera sensor, Huawei got rid of the fingerprint sensor on the back compared to the previous P20 Pro. This makes removing the back panel a low-risk job since there aren't any delicate cables that could accidentally get damaged.

Bi-directional wireless charging

Wireless charging is becoming common in flagship smartphones while some have also implemented reversible charging – charge other devices using the phone. The Mate 20 Pro is capable of doing the same but wirelessly too. This means you can wirelessly charge other compatible devices with this phone.

3D face unlock

The Mate 20 Pro has a bigger notch than its predecessor and for good reason. It comes with a 3D face unlock assembly explaining the absence of the rear fingerprint sensor.

Triple camera setup

The three cameras include the top right 40MP wide-angle lens, bottom right 20MP ultra wide-angle lens and the bottom left 8MP telephoto lens with 5x optical zoom. This is a shift from the P20 Pro which had a monochromatic camera instead of the ultra-wide angle lens.
