

Apple Watch plays doctor

Apple's newest Watch will support features such as tracking of irregular heart rhythms and recording ECGs. <https://dgit.in/jan19-51>

Instagram joins the pack

Instagram joins Facebook and WhatsApp by launching a voice message or 'walkie talkie' service on their app. <https://dgit.in/jan19-52>

Modular USB Type-C port

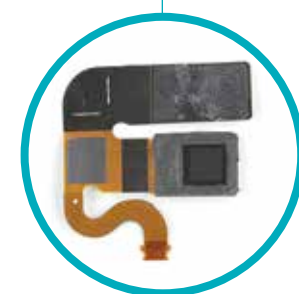

The charging port is attached to a big flex cable and not mounted on any kind of a daughterboard. This makes it easier to replace without having to deal with other onboard components.

Mate 20 Pro**

In-display fingerprint sensor

Although the fingerprint sensor was removed from the rear, Huawei decided not to completely ditch it. They installed one below the display, similar to the one seen on the OnePlus 6T.

Battery with pull tabs

You won't find any unnecessary and strong adhesive below the battery. All you need to do to remove the beefy 4,200mAh battery is to follow the given instructions on the pull tabs. It's that easy. All of this can be done by simply removing the back panel and the midframe.

New memory card format

Instead of going with support for a standard memory card, Huawei has introduced the nano-SIM sized nano-memory card. They are 45% smaller than regular memory cards offering up to 95 MBps read speed. Since Huawei themselves manufacture the NM card, they have complete control over read and write speeds.
