

Anthem demo gets rough start

The "VIP" demo for EA's Destiny-like online shooter Anthem ran into gamestopping issues. <https://digit.in/feb19-87>

Secret ear laser messages

Scientists can silently send laser-transmitted messages into the area around a person's ear. <https://digit.in/feb19-88>

FEEDBACK FOR THE JANUARY 2019 ISSUE OF DIGIT

Send your feedback at editor@digit.in

I got an extra copy of Digit January Edition at my address. I am willing to return it. What can be done?

—Asutosh Biswal

Thanks for letting us know Asutosh. Please gift it to one of your neighbours or friends who you think would enjoy reading it. Maybe ask them to subscribe if they like it :-)

—Robert

Right now my laptop's CD-drive is damaged and I'm unable to read any content of DVDs. So is there any possible way to access that content online?

—Sarthak Shah

Magazine DVD should be kept forever as it provides essential items under various heads.

—Karan Singh

I have been subscribing to this magazine since the days of CHIP magazine and I have seen this metamorphosed into DIGIT. under the Jasu Shah brand and now under the 9.9 brand.

I saw Robert's editorial imploring readers to rake your Survey 2019. I tried the link but there was a message that the digit.in server was unable to take the request. Probably it was overloaded.

My objective of participating in the survey was to give my vote for the continuation of the DVD. My reasons are many. Initially in the early days, with ultra low-speed connectivity it was impossible to download any useful software without hitches and even then we could not be sure if the software would load on MS-DOS and work as claimed. The CD and subsequently the DVD was the only means of getting hassle-free software that had been thoroughly verified for bugs, trojans, viruses. A second point was the software on the disks were curated and one could reasonably hope that the software was useful and would not screw up the computer. Today the internet speeds are quite good and downloading content is not difficult. However the choice of software and other content is mind boggling and i don't have the time to check out what is useful and what is not and the need for curated content still exists. Also there is only so much time I can devote to email, social media, internet browsing etc. One does have other things to do especially if you a non-techie. Therefore curated and verified (for bugs, trojans, viruses) content via DVD is still very helpful and

time-efficient. Lastly I keep on hearing that nowadays laptops and desktops are coming without DVD readers. and hence DVD's are no longer useful. However these laptops/desktops all come with USB ports and external DVD writers that connect through the USB port are cheap. I am unable to understand why this is a hassle.

In conclusion my vote is for the DVD to be retained. My apologies to Robert for not voting to reduce his pain. Lastly if it is of any interest, I will be 70 years in 2019.

—Jayakumar Natesan

Dear sir, first of all, let me wish you in advance for your upcoming 70th birthday from all of us at Digit.

I want to be clear about what we intend: We do NOT intend to do away with the curation and testing of software aspect that is the forte of the DVD today. We want to continue that online and make sure there is a curated "e-DVD" available online that's full of stuff not just for PCs but smartphones as well. The money saved from the DVD would be used to make a new book to read (like dvice in the December issue), and since we'd still be making an e-version of the DVD, we're essentially increasing our workload to offer much more at the same price. However, I intend to run the survey for a few months to ensure everyone gets their say and the decision is taken as per what the readers want. Right now, the results are pretty even, with about 45% still wanting the DVD.

Also, we've received many, many complaints about the URL for the survey not working. This is probably because most people are typing in **digit.in** instead of **digit.in** (that's **DIGIT.IN** – without the first 'i' of digit). Sadly, we might have made a mistake using **DIGIT** as our shortURL service, as most people either read that as digit or assume we

typoed our own site name.

Because we cannot run a bitly supported shorturl service with our main domain, we chose **digit.in**.

—Robert
