

WACKIEST GADGETS OF CES

The Little Cat treadmill

A smart exercise machine for your pet cat is what they're calling it. The Little Cat treadmill is an oversized hamster wheel for your cat to get some much needed exercise. It's all controlled so you can check on your cat anytime you want. So what's going to make your lazy cat use this little device? A shiny LED that's left dangling out of reach. At \$1,800, this is one expensive pet gadget.

Lamborghini Massage Chair

The Bodyfriend LBF-750 is a crazy expensive Lamborghini-themed massage chair. It features rich leather upholstery, a full-body massage system with custom massage programs suited to your needs. It even monitors your heart rate as it kneads

all those tense spots into a buttery mess. At \$30,000, this Lamborghini massage chair is costlier than most cars on Indian roads but hey, you can't put a price on luxury.

Pigzbe

Pigzbe is a gamified piggy bank with its own cryptocurrency wallet that aims to teach kids the fundamentals of saving. And also about cryptocurrencies. At \$99, this 'educational' device stores money in the form of Wollo, a cryptocurrency that's trading for \$0.0387/Wollo. We can't imagine teaching a kid about cryptocurrencies and how they might end up with less money at the end of the day because of the volatility of cryptocurrencies. What better way to acclimatise your kids to the cruel realities of life.

Smart Dog Toilet

If you don't go and poop outside in the cold weather, then it's certainly unfair to expect the same from your dog. Thankfully, there's Inubox to the rescue. It's a smart indoor toilet that senses whenever your pooch has conducted business on its premises and once the deal has been signed, it lets your pooch walk off and then closes itself to start the cleaning process. Cats were always low maintenance, now we can say the same for dogs. The price? Just \$1,200.

Mind-Boosting Sleeve

Remember Bradley Cooper from Limitless, how he could pop a pill and become super smart? The folks over at eSmartr have come up with a sleeve that claims to do the exact same thing. Once mapped to your brain, the sleeve can tap into receptors in your arm that sends signals to your brain. These signals can break up the interference between your brain's occipital lobe and the frontal cortex. It's a tall claim but they're only charging \$55 a pop, so what's the harm?

Numi 2.0 \$8,000 Alexa Toilet

Voice assistants can be very useful, they can help you organise your daily schedule, inform you about the latest news and even enrich your pooping experience. Yes, Amazon's Alexa has found its way into your washroom thanks to the good folks over at Kohler who've integrated the AI into an \$8,000 luxury toilet. Now you can ask Alexa to warn the toilet seat to the right temperature or activate ... the bidet. We don't know about you folks but this seems a bit too invasive.
