1MORE Triple Driver In-Ear Headphones

Luxury on a budget

In the last few years, 1MORE, a prominent name in the value for money section of audio products, has pulled out all stops with the 1MORE Triple Driver range. We review the 1MORE Triple Driver In-ear headphones to understand what the hype is all about.

Design and build

Where most brands go for muted aesthetics and economic packaging at this price point, 1MORE has packaged the Triple Drivers in nice, well-designed flip-top case that opens up to display the equally impressive contents. On the left, you have the carry case that houses all of the earphones except for the bits leading up to the tips, which are neatly slotted into their own grooves above, along with an airline adapter. On the right, you have the branded shirt clip at the top, and below it, eight pairs of tips (five silicone and three foam). This, combined with the angular design of the driver housings on the IEM will ensure that you get the best fit whatsoever. The expanded mid-section of the housing can be a problem in some cases. The aluminium alloy on the driver casing, the airline adapter and the buttons on the remote have received the sandblasted rose gold finish.

The wire itself is braided and consists of interior enamelled copper wrapped around Kevlar fibre up to the Y-split, post which it is the exposed rubber found in a lot of devices at this price point. The travel case included in the package has a magnetic snap cover. The case itself is quite well built - a simple blue leather design with red stitches and an embossed logo. Going full gold on the y-split would have been a very harsh choice, visually, however, the current design with a featureless blue casing almost goes un-

noticed. The 3.5mm connector is quite standard and robust.

Overall, there's little to complain about what the 1MORE Triple Driver In-ear offers at its price point.

Performance

While we've praised the build and design quite a

bit so far, that isn't the main reason we would recommend the 1MORE Triple Driver In-Ear to anyone who would ask. It is the audio performance of the unit that makes it shine, especially when you consider the cost.

Music on the 1MORE Triple Driver In-Ear is well spaced and detailed. Usually, earbuds suffer from both and often end up delivering sound that feels constrained and restricted. It is here that the 1MORE's triple driver arrangement kicks in to support its cause. With two balanced armature and one dynamic driver, these IEMs are more capable of handling sound across the frequency spectrum as compared to competing headphones. Picking out individual elements in songs like *Hunter* by Bjork is quite effortless.

The lows on the 1MORE Triple Driver In-Ears feel quite full and meaty. There's a slight mid-bass bump that gives the overall sound a warm signature, which we didn't seem to

mind. We found just the right amount of punch on tracks like *Uptown Funk* by Bruno Mars. Mids are also handled quite well with vocals in tracks like Chris Rea's *Call on Me* and Adele's *Hello* shining through. Instrument heavy tracks like *Pull Me Under* by Dream Theater manage to sound sharp and bold, without becoming a muddled mess of music. There's no distortion unless you're really pushing these in-ears to the extreme volume levels. Overall, the energy and fidelity that these units pack make them really worth every bit of what they charge.

Verdict

There's not one specific reason why these headphones are as popular as they are. Leaving out almost nothing in terms of build quality, 1MORE has also ensured great sound quality and memorable listening experience with the Triple Driver In-Ears.

While spending ₹7000 on these is a no brainer if you want the same experience without wires you might want to check out the recently launched 1MORE Triple Driver BT In-Ear - although we cannot vouch for it since we haven't had the chance to try it out yet. On the other hand, if you want to stick to 1MORE yet push up the detail try out their quad driver units that will cost you roughly ₹5000 more than these units. However, keeping everything in mind, it doesn't get more value for money than the 1MORE Triple Driver In-Ear Headphones. It's just the right mix of panache and performance.
