

### Android Q carrier lock

Additions to Android source code suggest that Google will give carriers new tools to SIM lock phones. <https://digit.in/feb19-11>

### Smallest image sensor

Samsung has launched a 20MP 0.8µm-pixel ISOCELL Slim 3T2 measuring 5.1mm diagonally. <https://digit.in/feb19-12>

## Xanova Juturna-U

Interesting audio customisability

**F**ollowing a conventional headphone design, the Xanova Juturna-U's lightweight design, with a low clamping force and memory foam earpads, together offer the right amount of comfort you'd want on gaming headsets. Impressive audio quality, brilliant microphone performance and amazing build quality are all present on the Xanova Juturna-U gaming headset. Whether we played open-world action games or platformers or even listened to music, the headset was able to deliver brilliant audio in almost every genre and use-case. Although it slightly lacks in the bass department, it still makes in-game explosions and gunshots sound punchy enough.

The Juturna-U has a brilliant microphone that manages to reproduce voice pretty much close to standalone mics like the ModMic 5. It doesn't try to boost the higher frequencies of your voice but rather adds some reverb to it. Although higher pitched voices are preferred in voice chat, some bass to the voice feels more natural. The voice quality on the Juturna-U is almost comparable to the HyperX Cloud Alpha and the Audeze Mobius that we reviewed last year.

The Juturna-U allows you to adjust the bass across three levels which essentially means enhancing those particular frequencies. It can be done with slider switches on each earcup. The virtual 7.1 sound card has an FPS mode button that enhances the high frequencies to benefit FPS gamers by bumping up the sounds of movements. Xanova has developed a really good gaming headset with all the necessary features right from the build quality to the features to the performance

—Abhijit Dey

### SPECIFICATIONS

FREQUENCY RESPONSE: 20-20 kHz | SENSITIVITY (@1KHz, 1V/PA): 95 ± 3dB at 1 kHz | IMPEDANCE: 32 Ohm (1 kHz, 1 mW) | MICROPHONE IMPEDANCE: ≤2.2k Ohm | MICROPHONE SENSITIVITY: -52dB±3dB | WEIGHT: 290g

## Sharp FP-J60M

Cream of the crop

**W**hile the J60M comes equipped with the Plasmacluster technology and features a three-stage method of air filtration, our review process takes the device through its paces to assess exactly how efficient the air purifier is.

The Sharp FP-J60M comes equipped with highest possible consumer grade air filters, sports good design and best-in-class performance which won it our Zerol award. Thanks to efficient air flow, high-grade air filters and the Plasmacluster technology, the Sharp J60M is capable of clearing the air of pollutants in a short period of time. Additionally, while the Plasmacluster technology is said to be capable of reducing pathogens in the air, there's no way for us to test it. However, the drop in PM2.5 and PM10 levels that we observed in a room is more than enough to reaffirm the purifier's air cleaning capability. Overall, the Sharp J60M performs well and is capable of cleaning highly polluted air with ease and in a relatively short amount of time, in as less as 35 minutes for a 120 sq ft room with a ceiling height of 12 ft.

While Sharp also offers other air purifiers in its J-series, we think that the J60M strikes the perfect balance between price and efficiency. It consistently performs well in areas with varying air pollution levels and is also effective for areas with high pollution levels like Delhi, Faridabad, Hyderabad and others. In case you want a device that is slightly less efficient but offers IoT smarts, you can go for the Blueair Classic 280i. The Kent Alps air purifier will serve well for users who are looking to buy an air purifier on a budget.

—Shubham Sharma

### SPECIFICATIONS

AIR FLOW/ CADR (M3/HR): 396 / 222 / 60 (High/Medium/Low) | PRE-FILTER: Standard Mesh Filter | AUTO RESTART: Yes | SENSORS: PM2.5, Dust, Odor & Light | NET WEIGHT (KG): 10.3 | POWER CONSUMPTION (W): 38 / 20 / 12 | NOISE LEVEL (DB): 43 / 40 / 15 (Max / Med / Low)
