

Shure MV88+

Audio quality in mobile videos remains a pain point. The visual aspect has been tackled with stabilisation technology making its way to a wide range of smartphones. The Shure MV88+, introduced last month at CES 2019, aims to tackle the audio front.

This updated microphone system follows in the steps of its predecessor, the Shure MV88, and adds features and better design along with accessories to improve the whole package. It is highly portable and comes with a roll-up neoprene case that makes it ideal for YouTubers, vloggers, journalists and anyone looking to create quality video content on-the-go. It was ideal to launch it at CES, one of the largest tech conferences in the world, which is mostly populated by people who fall into the categories mentioned earlier.

The overall package includes Manfrotto PIXI Tripod, phone clamp & shoe mount mic clip, USB C & lightning cables. Officially, the ShurePlus MOTIV audio & video Apps are also a part. They enable recording control, and the ability to save and share your content in multiple formats. The stereo condenser mic allows you to record different pickup patterns and choose the right one in the app itself. You're not restricted to the included tripod, as the included phone mount works with any standard tripod. Additionally, there's a headphone output that allows monitoring in real time. The app itself is highly useful, providing a number of toggles and tweaks for beginners and professionals alike. For instance, you can play around with a limiter, compressor with multiple strength settings, a high pass filter for 75 and 150 Hz, a left- and right-channel swap, and a five-band equalizer.

Dogness JS04

The Dogness JS04 is a smart retractable leash that was launched last month, after a CES demonstration. The leash attempts to redefine what a humble way to harness your pet during a walk could be. It goes for a modular design. The leash can swap out its standard structure for addi-

tions like a Bluetooth speaker, an LED light, or a poop bag container. If you're not sure how that helps,, you're probably not a pet owner yet.

It isn't just all show either. According to the official Dogness website, the material used for the leash boasts of four times the tensile strength required by the standards. While there are way too many colour options to describe them there, it can be bought in three standard sizes - small, medium and large. Their lengths are 3m(10ft), 4m(13ft) and 5m(16ft) respectively. In accordance with the size variation, their weight capacity also changes. The variants are suitable for handlings pet weights of 12kg, 25kg and 42kg respectively, however, the actual tensile strength goes way higher.

Louis Vuitton Horizon Earphones

T rue wireless earbuds have made their presence felt in the last year more than ever and if it ever needed validation from the world of high fashion, now it has one. French fashion house Louis Vuitton has partnered with Master & Dynamic to launch the Louis Vuitton Horizon Earphones, a pair of true wireless earbuds that will cost you \$995.

Beneath the Louis Vuitton logo and the redesigned exterior lies the Master & Dynamic MW07, a \$300 pair of earbuds that was launched back in September 2018. Packing identical specifications as the original MW07, the Horizon Earphones come with 10mm beryllium drivers, a 3.5-hour battery life, and support for AptX for detailed sound. The earbuds come in four colourway options – attention-grabbing red monogram, simple-yet-sleek black, classic white, and yellow and blue LV stripes.

The included charging case extends the battery life up to ten hours. The case itself is differentiated from the original MW07 in its new, circular form. It comes in white for the matching colour and black for other colour options.

Does all of this make it worth the \$700 additional over the already steep price of the MW07? You'll have to wait to find out as there's no clarity as to when these will hit the market.
