

AR based Google Maps

Forget GPS and a compass, AR Google Maps uses more accurate camera-based positioning. <https://digit.in/mar19-68>

Titanium Backup removed

Titanium Backup, a backup app is removed from the Play Store due to permission issues. <https://digit.in/mar19-70>

FEEDBACK FOR THE FEBRUARY 2019 ISSUE OF DIGIT

Send your feedback at editor@digit.in

I've been reading Digit since June 2018. I expect I have a lot of things I still have to catch up on with the Digit platform.

Now coming to the point, yours is a truly great mag for tech and everything. I KNOW you work your a**es off for this mag and the result is truly commendable. But if you want to make your mag a game changer (pun unintentionally intended) all you had to do was follow da damn traai.....I mean, just pay attention to what all the readers are saying. Most of the rigs in your mag are not even close to the price mentioned there, and are overpriced. The science topics you cover in the mag are fabulously written, but lack layman's terms. The topics you choose are phenomenal, but lack the essence of a truly great description sometimes. So that's all for the tech. The dmystify and Fast Track are very, very good.

I actually met Manish and Sid when I first started reading... it was in a CSGO Deathmatch and I asked them over the mic for a gaming pc with a budget of 25k! (Don't laugh). This year in the evo tournament held in Japan, the grand winner was a Pakistani, his name is Arslan Ash, and he is a truly great inspiration for defying all odds and hatred and achieving something. When I was watching his interview he said that there is a very large Tekken

community in Pakistan. So I thought why not us Indians, right? So many people with potential throughout our country are not aware of the esports held in India or worldwide. This is where you come in, and ranting about what games you play and stream isn't gonna win us tournaments. Please start doing something about it:

- 1) Major esports game character spotlights like DOTA 2 (suggesting gameplay style and builds), CSGO (recoil control), Overwatch (team compositions and tips and tricks), or even Tekken or Street Fighter (combos for specific characters).
- 2) EDM mix tapes because the YouTube ones are worse than sh*t.
- 3) Coverage of all the tournaments held in India as well as abroad.

I have trust on Robert sir's (huege Respecc) management and I hope he does something about this. Jai Hind. From Telangana with Love,

P.S.: In one of your digit diaries you said someone was booked to Guild Wars 2. It's Manish I think, but please ask him how to run Blade and Soul (it's the same developer NCSOFT) Also, downloading it is a Pain-in-the-a\$\$! I mean there are only two servers (Europe and NA).

How many times has Raaabo completed Half-Life.

Also now pls help me with a proper build for a pc with a budget upto 80k

(yep, a significant rise there). I want to run the upcoming games on 60 fps with at least 480p to 720p so a lot to ask there.

-R.Prajwal

Nice GTA reference there Prajwal. Thanks for the feedback, and it is valuable for us. We can see how the subheads are lacklustre and can do a better job at inviting the readers into reading the story. We will also make sure to use layman terms, or at least explain the terms we use in future articles in the science section. Regarding the PC components, you'll see a marked change in this month's rig pricings. We've updated and switched out quite a few of the components. Often, when we're compiling prices, the popular components tend to go out of stock and that drives prices upwards. Such fluctuations are also hard to counter since we come out with the issue once a month.

You want more PC video game guides? Alright then. You'll get 'em. We tend not to go with stuff that's already been covered in detail (DOTA 2 build guides, CSGO Gun recoil control, headshot practice), so we'll have to look towards some of the newer games. Apex Legends, perhaps?

Lastly, if you aren't planning on getting a cabinet, monitor, keyboard and mouse, then this configuration should work for you.

CPU	AMD Ryzen 5 2600	16,850
RAM	G.Skill DDR4 2666MHZ 8GB x2	9,000
Motherboard	ASUS PRIME-B450M-A	8,200
SSD	Kingston A400 240GB	2,850
HDD	WD/Seagate 1TB	3,000
GPU	ZOTAC RTX 2060	32,000
PSU	Cooler Master MWE Gold	6,050
TOTAL		77,950

-Mithun

Hello Digit. I have been an avid reader of your magazine since Oct. 2017 and this is my first letter to you guys. Your cover story 'PC Power' in Feb. 2019 issue made a very interesting read and the Fastrack on Photo Editing
