

DOES THIS SECTION EVEN NEED AN INTRODUCTION? FROM COMPUTERS TO MOBILES, AND HEADPHONES TO GPUs, IT'S ALL HERE...

THIS MONTH IN TECH: Learn about all the advancements in camera software that are enabling magnificent photos these days. Take out time to declutter your social media feed from unnecessary information. There's also a simple guide to help you choose the best thermal paste for your PC and more.

Apple SDK to allow porting iOS apps to Mac

Code named Marzipan, Apple is working on a brand new SDK that will allow developers to code apps that can be built for iPhone, iPad and Mac without additional effort. This would be similar to what Microsoft has been doing with the Universal Windows Platform. <https://digit.in/AppleUP>

WHAT'S NEW

Microsoft unveils HoloLens 2 Mixed Reality HMD

At MWC 2019, Microsoft unveiled the HoloLens 2, and it went up for pre-order on Feb 24 for \$3,500. It features improved build and comfort. It has new components such as the Azure Kinect sensor, eye-tracking sensors and is powered by an ARM processor. The HMD even has an 8-megapixel camera facing the front and uses USB Type-C for I/O. As expected, it has 6DOF and features an entirely reworked display. The field of view is now twice as wide as the previous device. Each eye has a dedicated display in front of it featuring a holographic density of 47 pixels per degree. There

are two cameras on the nose bridge focused on each pupil to measure the inter-pupillary distance. So, the images cast on the displays can be adjusted accordingly. The HoloLens 2 is much more power efficient than the previous Cherry Trail-based HoloLens 1, thus, giving it a much longer battery life. <https://digit.in/MSHolo2>

MWC is flooded with foldable smartphones

This MWC will be remembered for are all the foldable phones that were launched or announced. While the Royale Flexpai was the first to be unveiled at CES 2019, the mainstream manufacturers followed suit at MWC. Samsung led the charge with their new Samsung Fold followed by Huawei's Mate X. The Samsung Fold had a \$1,980 price tag and the Mate X took a step further to \$2,600. Aside from these two,

Xiaomi is reportedly working on a foldable phone concept but we didn't see that in action at MWC. TCL (OEM for Alcatel and BlackBerry) showcased hinge technologies that could

fold into different form factors. They had one that mimicked the Razer style of flipping and another that mimicked the Samsung Fold style. LG was the third company to have a foldable phone in the form of the LG V50 ThinQ. While the other two phones had bendable displays, the LG V50 uses a case that allows you to attach an additional display which folds over the existing display. <https://digit.in/MWCFold>

DJI announces new 3D geofencing system

In light of the recent disruption at the Gatwick airport because a drone that flew too close, DJI has unveiled a new 3D "bow-tie" geofencing system that'll actively prevent DJI drones from getting anywhere close to airports. <https://digit.in/DJIFenced>

NVIDIA launches GTX 1660 Ti, a non-RTX Turing

In light of the overpriced RTX launch and dropping stock prices, NVIDIA launched the GTX 1660 Ti, a graphics card without ray-tracing or DLSS. It offers about a 36% improvement in performance over the GTX 1060. <https://digit.in/GTX1660Ti>

Facebook may remove anti-vaccine recommendations

Facing the ire of lawmakers over the presence of harmful and misleading content on the platform, Facebook said that it is exploring removing anti-vaccine information from recommendations and other points of discovery. <https://digit.in/FBVacYes>
