WhatsApp turned 10 years old on 24th Feb 2019! Company is highlighting key milestones along the way. <https://digit.in/mar19-45>

FIT TO START

Startups are focussed on increasing India's fitness quotient

Arnab Mukherjee | Arnab@digit.in

W

hile some of us are self-motivated and enterprising when it comes to their own fitness, some (read:

most) of us need a little nudge in the right direction to get our fitness regimes in order, if they even exist. However, in today's fast-paced lives, taking time out to make and stick to one is a difficult proposition. It is either too expensive to get a full fledged gym membership, or there's lack of knowledge about what exactly is needed when it comes to specific exercises and diet. Even when there is, there's a lot of room for improvement and optimisation. A number of Indian startups are trying to solve these and other problems in the Indian fitness industry.

THE POTENTIAL

There's a lot of scope in the Indian fitness industry, driven by demand and supply gaps and lack of organisation. At the end of FY2018, revenues in the Indian fitness market amounted

to USD 908 million. Further growth in the segment, expected at a CAGR of 9.3% between 2018 and 2022, is expected to take the total market value to a whopping USD 1,296 million in 2022, mainly driven by the adoption fitness wearables.

Apart from the disposable income growing in the age group of 20-45, another factor driving the growth of this industry is the rising cases of lifestyle diseases like diabetes, obesity and heart issues. Currently, the industry is going a major overhaul from being in the hands of a few major players in the gyms and fitness equipment suppliers to a large number of smaller players willing to bring fitness at an affordable price and convenience to the customer.

PAY PER SESSION: FITTERNITY

Too many of us cite expensive membership costs as a reason to not go to the gym or fitness centres. Even those who can afford it often complain about the lock-in that ensues once you've joined a particular gym after paying a hefty sum of money. Startups like Fit-

ternity are all set to make such excuses history. The pay-per-session model on the app lets you book individual workout sessions depending on your needs and location, removing the need to be locked to one particular gym. With walkthrough videos and user reviews available, you can even use this to try multiple gyms before you get a membership for one.

fitternity
|||||

There's also an unlimited membership model with Fitternity that lets you add 100 workouts to your account. You can avail these as and when you need to, just by booking on the platform. The platform raised significant funding last year and plans to incorporate new features like tying up with insurance companies. These tie ups will let users avail better insurance premiums by sharing their health data. However, it
