

Multiplayer exclusives on PS4

The Chairman of Sony Interactive Entertainment has hinted at a new section of Multiplayer Exclusive Games headed to PS4. <https://dgit.in/mar19-73>

COBX Masters in Mumbai

The phase II featuring Dota 2 and CS: GO tournaments will be held with a total prize pool of INR 1,40,00K <https://dgit.in/mar19-74>

THE DIGIT COMMUNITY IS FILLED WITH BRIGHT IDEAS and we find the best among the best every month to bring them to you in this section.

I won Google Code-in 2018! (Drupal)

One of the best things about Digit are our readers and this month we're featuring **Sagar Khatri**, a Google Code-in Grand Prize winner.

Q How did you come to know of Google Code-in?

Neeraj, one of my friends participated in Google Code-in 2016 and was chosen a finalist by Drupal. He told me about Google Code-in and explained about the competition. That is from where I got the idea to participate in Google Code-in.

Q How did you prepare for it?

In 2017, I participated without any preparations. I chose Drupal as my organisation because of my prior experience with Drupal and other CMS(s). During the 2017 competition, I did mostly those tasks which I found to be easy. Probably, that's the reason I was chosen a finalist and not a winner then. My 2017 participation gave me an idea of what kind of tasks I should expect in 2018 and the required skills for them. So, I began with my preparations for the next year from there itself. Since Drupal is PHP based so I focused more on learning PHP. I preferred online resources for it. After PHP, I learnt working with version control (Git) and also removed the 'fear' of working on terminal that newbies usually have. Rest was some basics of 3D modelling and designing.

Q Elaborate upon the tasks given to you at Google Code-in

Participants have a variety of tasks to

Sagar Khatri,
Google Code-In Grand Prize Winner

choose from: Code, Documentation/ Training, Outreach/Research, Quality Assurance, or Design. Each organization has their own pool of tasks to choose from, participants can choose any task from any organisation to work upon. I completed 26 tasks, all of which were of Drupal. I ensured that my tasks were evenly spread over the aforementioned different types, I believed that this may increase my

chances of winning the competition.

Like, for design, I created 3D-Printable Merchandise for Drupal; for code, I did bug fixes; for documentation, I recorded tutorials for installation & configuration of some Drupal modules and so on. There were some tasks which were tough and required further learning, but it was all worth it.

Q Was this your first open-source contribution?

If you are talking about code based contribution, my first open-source contribution was during Google Code-in 2017. But if you are including stuff like feedback, documentation etc, I have been contributing to open-source since 3-4 years now.

Q How do you benefit from this?

I guess, the experience, exposure I got from this is the greatest benefit. Whenever I did a task which involved bug fixing, I received criticism on my patch work from experienced developers. This criticism helped me develop a habit to write better, efficient code. Moreover, it helped me enhance my cooperative, teamwork spirit. Apart from all this, the award, of course is a really beneficial thing for the future. I guess it will give me an edge over other students when I apply for colleges. The trip to Google HQ seems to be worth the hard-work too *grins*.
