

Image worth 50,000 photos

This gorgeous Moon Shot is a result of 50,000 individual photos snapped, stitched together to bring out the details. <https://digit.in/mar19-66>

GTA 6 may finally be announced

New Rockstar Games job listing suggests 'Grand Theft Auto 6' announcement could be coming soon. <https://digit.in/mar19-67>

Science and exploration are two reasons to venture into space, but at times humans have sent up things just because they can. These are the most useless things that have been taken into space.

MIT deployed 480,000,000 tiny needle sized copper antennas into space to boost long distance radio communication in the early 60s. 19 clumps of the needles are still in orbit.

Note: Artist's impression; size of debris exaggerated as compared to the Earth

Everything put into space eventually ends up as junk. About 7500 tonnes of man made debris orbits the Earth, made up of decommissioned satellites and discarded upper stages of rockets.

To celebrate 30 years of Star Wars, NASA took up Luke's lightsaber prop from the original trilogy to the ISS, where it spent two weeks in orbit.

An action figure of Buzz Lightyear spent 450 days on board the International Space Station, because NASA wanted to "encourage children and young adults to pursue their dreams".

Rocket Labs deployed a geodesic disco ball called the humanity star, calling it "a bright symbol and reminder to all on Earth about our fragile place in the universe".

Saparmurat Niyazov, a dictator in Turkmenistan blasted off a copy of his book, called Ruhnama, into space. Shown here is a monument to the book.

Elon Musk launched a Tesla Roadster into space, along with the "Starman", the silliest possible way to show off the launch capacity of the SpaceX Falcon Heavy.
