Bushnell Golf Pro XE

Golf is a sport where the precision and skill of the player are tested at every stroke, every turn. Accessories like a rangefinder are quite a common sight, especially in the professional circles. Among those circles, there's one name that pops up with almost 99 percent of the players, Bushnell Golf. Their latest rangefinder, the Pro XE, is a good example of why that is the case.

Bushnell's patented Slope technology gets a boost with the addition of temperature and altitude and has been rightfully rechristened into Slope with Elements. As a result, golfers using the Pro XE are expected to get the most accurate compensated distance readings ever. Bushnell Golf goes as far as claiming that the Pro XE will set the industry standard with its updated Slope algorithm. According to them, takes into account the most updated ball flight measures giving a much sharper angle of descent over the previous algorithm. The calculations in Bushnell's rangefinders take into account the actual ball flight, which is something lacking in competitors. On the other hand, making it tournament legal is as easy as

sliding a button on the side of the device, which turns off the slope function entirely.

The optics of the Pro range have also received an upgrade with the Pro XE, resulting in a clearer image. Seven-way magnification and an LCD screen make the interpretation of the data collected by the XE a breeze. The JOLT feature has also

seen an upgrade with the all-new PinSeeker with Visual JOLT Technology. When a player presses the button and hits the flag with the laser, the unit vibrates and a red circle appears, indicating the target has been acquired. A strong magnet on the side also makes it convenient to clip it onto any metal portion of the cart between shots. When it is available in late March, snagging one can cost you about \$550.

Chiron Sport '110 ans Bugatti'

The name Bugatti inspired reverence in the world of motorheads. Founded 110 years ago by Ettore Bugatti in the Alsace region in northeastern France, the brand is well known for its supercars, the now-discontinued Veyron and its successor Chiron, and their current flagship, the Diva. To celebrate the 110th anniversary and their French heritage, Bugatti Automobiles has released the Chiron Sport '110 ans Bugatti', a limited edition version of their already popular Chiron Sport. The heritage bit is pretty apparent from the appearance of the French tricolour, the "Le Bleu-Blanc-Rouge", as a highlight on numerous locations in the car, with the one under the giant rear wing being the most conspicuous. However, there's more to the car than that (how surprising, right?)

The front and the body get a carbon fibre construction, and a 'Steel Blue' paint job

in matt, with a matt black exhaust as well. The interiors get blue leather upholstery with Alcantara trimmings. The Sky View roof consisting of two fixed glass panels above the driver's and passenger's seats, available as an option on the Chiron, is a standard feature of the special edition. These panels have a newly developed laminated structure with thin glass and four intermediate layers. The innards of the special edition Chiron Sport stay the same as the original, but why would you even need something more? This beast can do 0-100kmph before you can say Mississippi thrice, and crack 300kmph in 13.1 seconds. So yeah, suffices to say that its fast and will satisfy your thirst for blistering speed. That is if you can lay your hands upon one of the only 20 pieces that will be made. If you ask

us, all we'd like to say is *tout le meilleur.*
