

Leica M10-P Safari Edition

When it comes to exquisite craftsmanship and excellent performance rolled into a single package in the world of photography, Leica is a name that pops up. Over the years, it has bestowed photography enthusiasts and connoisseurs with several instruments marked by the signature olive green. This time around, the M10-P that gets the limited Safari edition treatment, along with the acclaimed Summicron-M 50 f/2 lens.

In terms of the specs, it's nearly identical to the production version. However, the design will see a number of changes. For starters, the metal top cap and the bottom plate will sport the quintessential olive-green. This will be the first instance of the Summicron-M 50 f/2 to feature a special olive-green paint finish. The focal length engravings are dyed in bold red and all other aperture engravings are marked in white. The signature Leica red badge will be missing from the design. Only 1500 units of the body and 500 of the lens will be sold worldwide, with the former priced at \$8,920 USD and later going down for \$2,860 USD. If exclusive cameras are your thing, the Safari edition M10-P from Leica won't disappoint.

Technicon Carat 187

While there is no formal definition of a superyacht, let's all agree about three defining factors of one – it's big, it's expensive and it's filled to the brim with things to brag about. The Technicon Carat 187 Superyacht ticks all of those boxes and then some. Bringing their expertise from the luxury aviation domain into the high seas, Technicon have broken several conventions in the design of the Carat 187. From afar, it might look like a typical superyacht, but as you get closer, the asymmetric design hits you in the face. Simple, smooth lines on one side are complemented by geometric sculpted lines on the other in order to reflect the introverted and extroverted aspects of the ship's personality.

Another design aspect is the 'red carpet' elements around the ship, most notably on the dual stairs at the rear. Guests visiting the yacht get the feeling of walking on a red carpet since this is where they are going to get on. Oh, and there are two swimming pools, because, why not! Ample deck space and outdoor dining areas make the superyacht a party haven, and there's an equally expansive bedroom to crash in when you've had one too many at the awesome parties you will have on this monster. It's still a concept so there's no price tag, but it's bound to cost in excess of \$100 million.

TH CCH02TTN?

That's not an official name, but we had to shorten it because "Tag Heuer Carrera Calibre Heuer 02T Tourbillon Nanograph" was way too long to fit in the space we had for the headline. The Carrera Calibre Heuer 02T Tourbillon Nanograph is a watch that features patented technology that has never been seen before. The watch features a hairspring made of carbon composite, something the design itself doesn't shy away from showing off. This model is a successor to the Heuer 02T which was groundbreaking itself in terms of pricing for a Swiss tourbillon chronograph. However, the new edition goes even further!

You'll see hexagonal motifs all around, which point to the hexagonal structure of the carbon used in the hairspring. More of the movement is visible through the open-worked dial and rotor. While neon green accents adorn everything from the tourbillon cage to the column wheel, the aluminium balance wheel is set with both white gold weights and white Super-LumiNova so you can see it beating away in the dark. Beyond the visuals, there are upgrades to the performance too. According to Tag Heuer, the carbon-composite hairspring is virtually immune to gravitational effects and shocks, offers higher precision due to perfect concentric oscillations due to its geometry, offers easy assembly and also exhibits better thermal performance in pairing with the aluminium alloy balance. It will cost \$25,500 and is available at Tag Heuer stores from May onwards.
