

Qualcomm's upcoming hybrid VR headset

New headset design from Qualcomm will work as wireless VR headset with six degrees freedom and also links to PCs for PC VR gaming. <https://digit.in/apr19-73>

Xiaomi gets pressure sensor

The Black Shark 2 gaming smartphone gets a 6.39-inch pressure-sensitive OLED display. <https://digit.in/apr19-74>

Creative Stage Air

The PC soundbar experience on a budget

Price
₹5,999

The Creative Stage Air is a compact device. It has a small and light profile. It

would fit into most backpacks along with its accessories. The 3.5mm cable it comes with is laughably short at 450mm. The body is mostly plastic with a glossy finish, with the metal grille on the front. The glossy finish makes it a fingerprint magnet and it is also prone to scratches. There are rubber feet that keep it from sliding and the four buttons on the right are hard to press. There's no waterproofing on the Stage Air.

The Creative Stage Air comes with two drivers at 5W power, and a passive radiator to pump bass. Overall, the sound signature leans heavily towards the lows, with the mids handled satisfactorily and the highs miserably. As long as you're listening to hip-hop and electronic music, it's easy to miss the shortcomings, but switch to tracks that rely on the higher end of the frequency spectrum and the crack start showing. The stereo separation on the Stage Air is handled quite nicely for its asking price. We also pushed it through a couple of scenes of John Wick and it was quite disappointing. The beats fell flat, the gunfire lacked any impact at all, and for most of the scene, it was difficult to distinguish one sound effect from another, let alone understand their point of origin. Dialogues were handled satisfactorily but lacked depth.

Don't expect the soundbar to fill a room either, instead, it performs well in its intended position - under a monitor with you approximately 3 feet away from it. It satisfies three main requirements - it is cheap, it is a soundbar, and it works. Even at its current state, the Stage Air is a great way to boost your system audio.

—Arbab Mukherjee

SPECIFICATIONS

DIMENSIONS (H x W x D): 70 x 410 x 78 mm | WEIGHT: 910 g | POWER OUTPUT: 2 x 5 W | TOTAL SYSTEM PEAK POWER: 20W | FREQUENCY RESPONSE: 80Hz - 20kHz | BATTERY TYPE: Li-ion, 2200 mAh | SNR: ≥ 72 dB | BLUETOOTH: 4.2

CORSAIR DOMINATOR PLATINUM RGB RAM 3200 MHz

Goodbye gaudy RGB

The DOMINATOR PLATINUM series of memory modules from CORSAIR

are probably the best built

memory modules in the market, it's

certainly better than anything

we've seen. While the DOMINATOR

series have been

around for quite some time, this new launch is centered around one key

feature, the RGB LEDs.

CORSAIR partnered with Primax to come out with their new Capellix technology that allows them to place LEDs

directly onto the PCB allowing

them to increase the density. Each Capellix LED is 0.2mm3 which is a stark reduction from the 2.8mm3

SMD modules that are currently used by most. Aside from the greater packing density, this also allows

them to reduce power consumption and have much higher reported lifespan. RGB LEDs with their high

power consumption take away from the overall power that each DIMM slot has access to. This leads to

difficulties in hitting tighter timings but with Capellix LEDs, that power draw is minimised. Performance wise,

we don't see any meaningful difference between the CORSAIR DOMINATOR PLATINUM RGB against the

other 3200 MHz CL14 kits. However, if one were to take aesthetics into account, then this is by far one of the few

modules to make RGB look good and not gaudy, however, like most high-end modules this one does come

at a steep price.

—Mithun Mohandas

SPECIFICATIONS

TYPE: DDR4 | CAPACITY: 4x 8 GB | RATED SPEED: 3200 MHz | TIMINGS: 14-14-14-34 | OEM: Samsung B-die | PART NO: CMT32GX4M4C3200C14 | WARRANTY: Limited lifetime.
