Kodak 43-inch 4K TV

A good panel with bleak smart features

Price
₹22,999

The build of the TV is plastic, but it isn't bad. It works well whether you mount it on a wall or place it on a table. We only wish the bezels weren't as glossy as they are and the feet were metal. One HDMI port is close to the USB ports to make connecting devices like a Fire TV Stick or a Chromecast a lot easier.

The Kodak TV allows you to control things like backlight, brightness, contrast and more to get the picture setting you want. 4K content is enjoyable. You don't face any of the brightness issues you see on budget HDR TVs which is a good thing and the experience is a welcome one. The 1080p content consumption from the TV is also good. In terms of audio, watching news and soap operas on this TV should be fine. However, movie and music lack the expected thump. The UI of the TV is something we saw last year and there has been no evolution since then. The remote control that you get with the TV is made of plastic, traditional and functional. It has a slight curve at the back which adds to the ease of grip.

Overall, if you are looking for a TV with a bright panel for watching content and gaming, for the price, you can consider the Kodak TV.

Syska Sound Cup

Feature-laden average performer.

Price
₹6,999

Most of the plastic body of the Syska Sound Cup is covered with a fabric mesh, but press onto it and the plastic beneath begins to creak, although not too audibly. The materials used don't feel cheap at all and reflect proper attention to detail and ruggedness. The speaker even sports an IPX4 rating, protecting it from splashes. In terms of connectivity, you get the usual Bluetooth as well as NFC and Aux-in. This is where another bad design decision rears its head. The Aux-in port is at the bottom of the speaker, right between the rubber feet. So, if you connect an Aux-in wire, you would have to obstruct either of the faces or choose to block the speaker output itself.

The output of the Syska Sound Cup is definitely leaning towards the warm side of the sound spectrum. The overall 24W output doesn't leave room for any complaints about the loudness, but there's some amount of distortion at the maximum volume. The Sound Cup falters with the highs and the mids.

The indoor mode pushes out rumbling bass, whereas the outdoor mode boosts the mids and the highs in an attempt to sound better in open spaces. The calling performance on the Sound Cup leaves much room for improvement. The speaker took really long to connect to a paired phone on a number of occasions.

Overall, If features like NFC, an analog volume dial, being able to switch between indoor and outdoor modes sound interesting and attractive to you, give the Syska Sound Cup a shot.
